t looks aint everything, I have heard they are more
special than say the Great Rivers.
I'd love more opinions
It looks well made..and by grabbing an API rack, it will be more cost effective
in the long run, as API modules are relatively inexpensive..

, Mike had retired from modding other mikes because he said he
needs more time to work on himself.

(damn.....am I Mr. Clever today or what?)

;o)

Thanks.Yeah you are the second guy to remind me of these
Although once a lunchbox is purchased the API stuff is cheaper.
Also, after a few years or working in a studio with a NEVE board as well
as doing some stuff on a Tweed, I think I want ot move awy from Neve for
a while.

Regards,

Dimitrios

ps:

The author told me that he dropped developement but he will give me the code to continue !

Anyone interested aand have the skills ?

> Now the most obvious trick I missed (well didn't think that would work but
it does !) was to just to nudge the audio tracks you wanna use with
senderella for 100ms to the left and just put in a slot after senderella
voxengo (free) sample delay 384 samples to the right.

Remember $100\text{ms}=4480\text{ samples} - 384 = 4096$

That is if you use Spinaudio wrapper that lowers buffer with a 4096 UAD
plugin latency.

If you will use multifxvst then use 50ms nudge to the left and 182 to the
right ($50\text{ms}=2240 - 192 = 2048$)

Regards,

Dimitrios do you have the mec/442 turned on and properly connected?
