Hi Everyone,

Have been out of the Paris loop for a couple of years due to newborn children. A friend of mine has some project he wants to throw together that involves manipulating a couple of wav files. I can't get them to import. I'm guessing they are not formatted correctly. Would anyone be kind enough to take a look at them and give me the quickest solution on how to make them import friendly.

Thanks as always.

Barry

Probably need to strip the wav files go to

<http://www.lightlink.com/tjweber> and download stripwav

Stupid question. Does stripwav create a new file or modify the existing one.

Thanks

Barry

good to see you again sanbar...

<http://www.lightlink.com/tjweber/StripWav/StripWav.html>

there's your magic bullet man. Run 'em through this and the header info will make sense to Paris.

Hi

Thanks for everyone's help. I got the two stereo files to import but the mono file comes in sounding like the chipmunks. Any ideas. It's the file that begins with DM

<http://www.lewismediagroup.com/ads/New%20Daya/>

Thanks again

Barry

Haven't heard the file, but it's probably a sample rate issue. 44.1k file imported into a 48k project will do that.

Try importing it as a mono file [not stereo].
