I was on holiday until a moment ago. PARIS doesn't have the ability to use Rewire, either as a host or a slave - it was discontinued around the time ReWire was invented.

I use three ADAT cards and ADAT sync to an RME 9652 card in the same computer to achieve similar results with PARIS/Reaper (sample accurate sync/transport coordination/24 tracks).

Theres a friend of mine at R&R studios that uses cubase through REWIRE on PARIS but he claims he forgot how he set it up and that he had to download some software to do it

That would be of *great* interest to discover! I wonder what he's doing to pull that off?

Yes, it's easy, but the way I do it (listed in the other thread) requires two extra pieces of hardware: at least one ADAT card in your MEC, and a sound card with a 9-pin ADAT sync connector. That will give you sample accurate sync and as many channels of transfer as you have the MECs/ADAT cards/audio cards to support. I have three ADAT cards flowing into one RME card - hence 24 tracks, split over two MECs.
