Sweet!! I'm gonna have to invest in one of those cards.

I love UAD1 plugs, BUT... I think they need to start combining their stuff into fewer products. Most companies would have a Precision Limiter, Maximizer and Buss compressor (don't they all do the same thing?) in one unit - and maybe even the Multiband too.

There's a hardware unit FS on EBay.

I used mine on every mix on the kick and snare. Sometimes on bass too if the bass lines weren't too busy.

I don't think they are all that expensive new, but for how often I would probably use it, I'd rather get the plug.

OYeah!!!..or sustain it almost infinitely. It's basically a "punch a hole in the wall" kinda box.

Not quite. Most buss compressors are emulations of either the SSL (Quad Compressor-Buss compressor) or the Fairchild 670. These compressors do one thing and one thing well and that is glue together a mix..Some may even describe it as, they narrow the stereo field a bit and holds a tight grip on a mix. Whereas a maximizer does not "glue " a mix, but lets you get loud. The Multiband, is really more an clever eq ,but lets you compressor different bands..

The term precision limiter is a new term for me. I think this kind of Compressor combines the Maximixer capabilities along with Intelligent Limiter (alas Paris). To allow some harmonic distortion in a smooth way, but not overs..

Bill....I agree with you, they are all the same thing, just models of different circuits with their respective behaviors..Until someone in this can point me to the white papers of the models used for these emulations I'll make my own judgments.

its about the money and getting reimbursed for their R&D.

I sold mine last week. With Paris, the hardware TD 4 is a pretty awesome

processor to have in the arsenal.

I/O latency on the TD is 0.81ms.

Sonnox has a Transient Modulator for Powercore. I think they have one for native as well. Waves TransX is supposed to be able to do something similar, but my bets are on UA. In fact, they are so much on UA that I sold my hardware TD4 last week.

Yes, and there are software options too. But I'm treating Pulsar like PARIS, great sounding gear that has essentially been obsoleted by the manufacturer. I own a bunch of the John Bowen synths and some cool plugs for it, and it's a fine mixer/router/patcher, but if I can get the same sound on UAD (I think one of the companies with the brightest futures in the audio biz) over Pulsar, I'd be foolish to go any other way.
