Noise Freaks,
The noise sounds computer like. It is coming down the analog line and is not related to proximity of the cables although I can't really move them much. It sounds like wc (almost) faintly in the background and it moves up and down with the fader. With proper gain staging it improves but still sucks. I'm working on a ballad that needs quiet. I can't get any of my 4 Mecs to work at this time so I can't bus via ADAT for this mix. I never heard it through ADAT in the past. I am hearing it through SPDIF now though.

With a 442 at the receiving end and a spdif and stereo analog at=20 the cubase side what would you do?
Problem Child Tom

It just dawned on me that the Cubase machine is receiving clock at 48k from an ADAT machine through the Scope Pro card. This is probably the source of all evil here. Can someone=20 walk me through changing the clock settings to internal on the Scope card? It has been so long I've forgotten how to edit it. I looked and didn't see it. This Paris project is at 44.1 so that could be a major problem.

Dimitrios, Thad, Aaron?

Thanks as always.
