I've got a small storage space that I have cleared out. I found an old piece of sheet metal on the floor of the space which was wide and thin enough to bend and wedge between the two walls of the space so I thought I'd enlarge the room ambience with it. I've been playing around with this a bit today. I've got one room that can accommodate a cranked amp while still providing enough isolation for tracking acoustic instruments without megableed, but I needed two of them.

The room is right off the main tracking area. You can hardly hear a 35W amp cranked full out when standing where a vocalist usually stands when tracking. I've got a couple of very dead iso booths.....but hey!!!..they're dead. I wanted some ambience.....not digital reverb applied to a dead space.

The room is about 10' long. I set the cab about a foot inside the door, I set the sheet metal plate about 2' from the back wall. I've got the R84 about 4' in front of the amp with the backside facing the amp grill and I've got an SE3 which is a cardioid with a 1" diameter capsule facing a fairly resonant area of the sheet metal with the grille about an inch off the plate.

Here's a clip of some stacatto strokes so the ambience is obvious.

<http://www.mediafire.com/file/tmmmqgz3yt2/guitar room.mp3>

I'm sure I'll dial it in a bit more and probably try a different kind of sheet metal. One of the guys who helps me out here has a metal fabricating business. We'll probably build something free hanging, but I'll wager I could use this on a session and get something out of it that would work.
