Picked up one of these last night.

<http://www.infinitymusicsystems.com/specifications.html>

Mine (the actual) is pictured second from the bottom.

All I can say is OMG! Wow!!! and wish I could get my EDS cards in the thing. Might try it.

Mark have you ever looked at Open Labs keyboards? [www.openlabs.com](http://www.openlabs.com)  
Just curios if you had commpared. Jim

Hey,

The keyboard looks cool.

I'm assuming you can get the unit with no computer hardware?

All the computer hardware listed is over 3 years old so hopefully you can put your own stuff in it.

The M-Audio FW 410 is discontinued also so hopefully your able to install other audio interfaces.

Chris

Chris... the website is apparently needs updating. The guy has been through a terrible divorce thing over the last 2 yrs. But yes, the whole thing is, as spec'd on the site, wide open to upgrade, MAC or PC. He had a dual g5 mac in there when I was down.... gorgeous inside and out. Another had a built in 8-fader uni-contoller. Casings are ventilated top and front and backlit such that a purplish-blue light emits from the i/o side... looks almost as it good as it sounds.

Mark
