I'm wondering if anyone has found a way to MIDI sync Paris (Master) to Reaper (Slave) with both programs running on one computer.

Could this be done without a MIDI interphase?

I'm pretty sure you can MIDI sync on 2 computers with each computer having a midi interphase:
Paris Computer Master to Reaper Computer slave.

I have seen postings of using the adat interphase but I don't know if people are doing this on one computer.

Have you looked at trying rewire.

Unfortunately I have no idea if it will work with Paris

OK, I got Reaper (Slave) to sync to Paris (Master) via Tascam US-122 USB Audio/Midi Interphase.

Paris Master:

Paris/Settings/MIDI Setup

Select MIDI Time Code Output: US-122 MIDI Port

Use 32 bit MTC output routine

Paris/Settings/SMPTE Settings

MIDI Timecode

Reaper Slave:

Reaper/Options/External Timecodse Synchronization

Use input: MTC: US-122 MIDI Port

Tascam US-122 USB Audio/MIDI Interphase:

USB to Computer

Midi Input to Midi Output

works!
