The next step for Gene is to experiment with is passive analog mixing.

with high samplerate recordings without suffering the collapse of the sound field.

Next up is building a passive mixing array followed by my GTQ2 pre and Portico Compressor/Limiter.

This may be a few weeks off, but I have high hopes that this will help close the gap between what I hear in my head and what I get.

The new Korg MR-1000 1-bit recorder is the likely 2-track but its not available yet.

I will post about it as things progress.

Gene

Hey Gene! Have you considered the Folcrom Passive summing buss? I think
it's street price is around \$700.00 to \$800.00. A lot of people like it.
Maybe you could try one out.

<http://www.rollmusic.com/systems/folcrom.shtml>

Or better yet, I'll just toss Geno a couple of benjamins
& he can build me one... RIGHT, Gene?

:)

When I was young I enjoyed sitting in my parents musty basement sucking up
solder fumes, but less so today. If anyone should have lead poisoning and brain

Today I keep my iron locked up most of the time.
But I think I can handle ONE summing box.

Tyrone --

I was about to say the same thing -- not a good sign at all... Might
be time for Gene to step away from the computer and walk around

outside for a while. By himself, if you see what I mean...

-- good luck with that, Gene, and keep the good thoughts coming, both of you...

chas.
