So,

I get many stops while playing back whenever a vst plugin with heavy gui is loaded.

Any tips to recover ?

I use matrox 550 card.

Would a higher MB graphics card wok better ??

Thanks for any input.

Regards,

Dimitrios

What is your Paris config settings? Have you tried uping the i/o and cache settings?

Rod

Hi,

As I remember I use 128mb

21000 cache

128 I/O

I think though that I tried higer I/O.

Thanks !

Dimitrios

Yes.. A Better Grraphics card will yield better sytem performance in Paris.

Take the Waves SSL plugs.. You have to have a certain graqphics card performance,  
or they won;t run well..

hey D, you are the man when it comes to Paris, so you probabably thought

of this, but do you close all your unused windows like that Audio window and such? Sometimes I see jitter when I don;t do this, and kl get an occasional freeze.

Not to change subject, but D, can I hear some of your work?

What plugs do you refer to?

Hi Dimitrios,  
I had Paris stop every time I used the Waves SSL GUI. There was an update to the graphics card driver that stopped the problem. I think there is information at Waves about this problem with many graphics cards. Maybe this update will help other plugins too.  
Good luck.  
Tom

Hi Tom,  
My emails still bounce back so I will use this forum to reply to your questions  
!

Hi !!  
I hope that you are well with your foot !  
Regarding your questions all are positive !  
Yes sample accuraccy there.  
No pci extra just the synplate added to scope card.

Use ASIO2 protocol under cubase.  
By starting Paris Cubase follows sample accurate.  
Let me know if you need more detailed instructions as how to do this !  
Regards,  
Dimitrios
