Subject: Importing .wavs from a cd

Hello everyone,
It's been around a year since I've played around with Paris and it's good to
see there are still some folks determined to hang on. I remember reading a
post a couple of years back were someone stated that in order for Paris to
read some .wav files, that header information would have to be removed
first....I'm trying to import a track from an off-the-shelf cd and I can't
get Paris to see/play the files in the right way. I have Wavelab 4.0, which
I used to copy the cd track into. I've tried saving in both .wav and .paf
formats, stereo (i take it Paris can't read an interleavened stereo file)
and left and right mono with no luck. When I import the file as two mono
tracks using .paf extensions, I end up with tracks that are are three times
as fast as the originals (I have my record path set to 44.1 khz). If I save
and add them as .wavs, I end with no audio and tiny file sizes, which
indicates to me that the audio isn't being saved, only header info.
I hope I have explained myself well and would appreciate any tips.
Thanks,
Edric
