Different compressor?
Interesting whats the difference?
In algorithm?
Do you know anything about it?

>Ok, Looks like Sound Forge's CD architect has the CD sequence options I am
looking for. I have read here there is a question regarding how it sounds.
Can anyone using it tell me what they think?
```

What 5 am looking for is some sort of bidget mastering prog for gig demos and pre mastering refernce CD's

I have found it for about 200.00, wavelab runs about 500.00

ThanksWavelab Essential is around \$99US... basically it is Wavelab 3 repackaged. Would do a fine job for what you need.

David.

d or a software conflict with a third party software that I had pre installed, so I'm not blaming Tiger just yet. I love the features in tiger. I have more than one Mac and I've got to say, Panther is as solid as a rock.

Rick, are you exclusively a Mac user?

**James**

How are the IRQ's hard wired to the PCI slots in the bios? Are any PCI slots

always sharing with the AGP?

Does the bios of this mobo support dual core processors?

Thanks,

Mr. Simplicity

ore work great in either setup. The only issue is with the UAD on the AMD64 X2 is you have a firewire audio interface. UAD is already working on this (we sent them a machine).

If you want to get something that is gonna the most future proof (if there is such a thing) then the Tyan s2895 with the Opterons would be the best choice. But also the most expensive at the start.

The K8NS like all of the Nforce 3 chipset motherboards are on the way to being phased out. The Nforce 4 single CPU board are having performance issues with PCI. They will hopefully be changing this with some chipset changes soon.

If your money is tight then the AMD64 X2 single processor will still be the best choice for performance.

Best price/performance:

AMD Athlon64-3500+ 4000+ X2-

```
3800+
4400+
Opteron-
242 (1.6)
248 (2.2)
OPteron Dual-Core-
265 (1.8)
275 (2.2)

(859) 635-5762HI Rod,
Good to here everything is working so far. I know Kim seemed to have
some growing pains.
The better HDTach performance usually means that the drive controller is
probably using more PCI than it should to show better benchmarks.
I always put the SATA drives on the NVidia SATA controller which is
technically off the PCI buss on the Gigabyt
