Are there recommendations for the cachesize and the other various parameters in paris.cfg? I'm running an older AMD Athlon in an Asus A7V8X-X Mobo on XP.

Heya Rich - I tried to collect as much solid info on the paris.cfg as possible in the wiki here. It's not as complete as I'd like but it's got some good info.

Kerry, thanks so much. That's exactly what I was looking for. Over the years I've tried to archive info from Chuck's group and the old "great idea" group, but some of it's been lost.

For the way I work Paris still totally rocks. If it doesn't sound good it's not because of the recording system. That's all I can ask. You guys keeping Paris alive all of these years has saved me tons of time and money. Thanks a ton.
