I don't seem to have any eds reverb plugins available in 3.0. I can pick compressor, delay, long delay and external plus some other things I don't know what they do. I have paris 3.0 with mikes drivers and tried installing paris fx for xp but I still do not have reverb available? Did paris ever come with reverb? I love ensoniq reverbs and could really use some. Can any one clear this up for me?

You should have a mono in stereo out plate, and stereo in stereo out room reverb, as well as a non-linear verb. I think these will show on the auxes only, and not on the inserts...

Cheers

Kris
