Does anyone know of an app for Windows XP that when you log off/ shut down it will return the system to its previous state, including removing all newly created files? Basically like ghosting the drive with no user intervention?

Thanks in advance,

Jeff

Hi Jeff,
Umm I think you can do something to that effect with Acronis using the task scheduling functions in it. Don't have the ability to test that atm. Is this something you want to do every time you boot?
What sort of craziness are you up to that you need to do that?

Chris,

Have customers that are Hotel people. Putting these in business centers. They want to have it blow anything anyone has done when they sit down at it and return it to the previous state. I've heard of some schools doing the same, but haven't got a line on what they're using.

You don't even have to wait for a reboot for that, you can just go to your Internet Explorer "Advanced Settings" tab (under the "Tools" dropdown menu up top) and go down to the "Security" section & check the box that says "Empty Temporary Internet Files folder when browser is closed", and also the box that says "Do not save encrypted pages to disk". Then post a little sign on the frame of the computer screen that says: "For your

security, make sure you close browser when done."

Neil,

Good idea...looking to do that for the whole machine though, not just internet traffic. All registry changes that could happen, files created or modified (IE word docs). Basically want the boot drive to be the equivalent of "reimaged" after each user.

Paul ,

That's the ticket! THanks a bunch.
