Just wondering if anyone has a hackintosh rig that they also use for paris (in xp not osx)

from what i gather most people are using the asus p5k mobos

I'd like to try paris out, and have a hackintosh.

What do you think the chances are of having Paris working on an asus p5k?

Why wouldn't it work?

You'd just be using Paris in it's native windows mode on a native windows computer.

Or are you asking if you can run it in virtualisation mode ala Parallels or Vmware through the Mac interface?

What's that company that was selling their own brand of hackintosh computers retail?

I think they were getting sued by Apple, but the prices were great. They had three different models I think. You could also triple boot them with Linux, Win and OSX.

Cheers,

TC

Psystar sold mac clones

I though people had only got some mobos with specific chipsets to work?

Or is a Paris rig with multiple eds cards and uad cards stable with any mobo? What about with a magma chasis attached?

Eds cards are for PCI slots right?

I'd like to build a hackintosh rig using am asus pk5 mobo to run osx but also to use xp running Paris in xp (no paralells or vmware)

Phystar, or some derivative if that.

Have you checked on the Hackintosh wiki that that M/B is compatable?

The other way to go is EFix (www.efix.com).

But that again relies on compatable M/B combinations.

I believe that p5k mobo is compatible, except no one has got wireless or sound working in osx.

My ideal goal is to have a hackintosh/paris rig.

4 eds cards , 4 mecs 64 inputs/outputs with adat on each mec.

then have 3 HD's. one operating system/program HD with xp and osx on it. and two other HD's for projects that are mirrored so if one goes bad i have an exact copy of the other.

Does anyone have a rig like the one above^^ i.e having 4 eds cards in a mobo

i was paroozing threads last night and someone referenced this mobo

<http://www.asrock.com/mb/overview.asp?Model=AM2NF3-VSTA&s=AM2>

from this thread <http://kerrygalloway.com/ParisForums/index.php/t/13914/>

i read that once u have 3 mecs u need a worldclock tho. is there one that anyone can recommend?

Also how useful are the UAD-1 cards for mixing? i've never used them, are their plugins that great or useful concerning what is in paris or these extra drivers <http://www.ensoniq.ca/>
