ight flanging, but nothing more. Again,
that was just a couple of tracks though, for test purposes,
with no plugin's, etc.

I've been using www.whalemail.com so far, so good.

Craig M.I thought it would have been the dedicated hardware on a card like the MQX
that was the magic?

nly time that I heard of it working succesfully, (In some form) was
with VITC, the time code that is carried in the video signal of a video.
It never worked consistantly with LTC, which is the common form of timecode
that most audio post studios read.
It converted the SMPTE signal into MTC that Paris could read, and
consequently sync to Picture or another tape machine.
