Just purchased Drumagog [4.03] at NAMM. Runs fine in my WIN 2000 audio apps. But... can't seem to get Paris to see it. I searched the forum, and tried a couple of things there, but no luck. I apologize if I missed the answer.

I'm using win 98 SE for PARIS [dual boot machine]. None of my VST .dll files appear in the designated VST folder. So, is this a Win 98 issue?

I have a project coming up soon, where I know Drumagog will really help. Thanks in advance for any help.
