I just read this on another NG.....

NAMM: Classic Neve Effects, Soon in Computer Form

I'd already heard that Universal Audio, makers of fine DSP hardware for computers as well as vintage analog reproductions and other DSP tech, was going to be pairing up with someone big at NAMM. That "someone big" has turned out to be AMS Neve Limited, who have made some of the most famous signal processors in history. You'll be seeing those running in emulated form on Universal's UAD-1 system, a DSP card that sits inside your PC or Mac. Universal says the first will be the Neve 1073 Equalizer.

Looks like it's going to be an interesting year

;o)

Apple would be smart to keep building the G5 Mac tower, as well as the Intel  
boxes. In time IBM's technology will catch up. Per processor speed, and  
cooling are the issues, time will take care of all that.

I wonder what these systems will cost???

James

my guess is that if you're already missing an arm and a leg you had better look for something else. ;o)

Ensemble does look interesting.

If only it was PC compatible (Maestro, that is)...

Then there's Symphony with six AD16's for 96 inputs - probably around \$25,000 for that size rig - a bit pricey, but it would be a killer rig.

I always thought Apogee was in good with Digidesign. I guess they figured Apple is the new big dog on the block. ;-) Probably a smart move. Even though I don't use a Mac anymore, and Logic sits idle on my PC, I always liked Logic.

Regards,  
Dedric

....hmmm... ..if you have a PC, you have to learn something more then only  
using the on/off knob...hmm...;-o)
