Thanks Neil

You've been a great source for freebies

A very simple to use, yet very cool compressor - works
especially great on kik, snare & toms. Doesn't take up much
CPU power, either:

http://www.braindoc.de/vst/Compressor_v1.0.1.zip

Another simple tool that basically allows you to set
levels/phase/etc on a single channel. Handy if you've got
something that you've automated volume on, and it's a little
hot or a little soft overall, but you don't want to rewrite all
the automation moves; OR if you're in a Native app & you've got
that overstuffed mix buss thing happeneing - just insert this on
all your audio tracks & bring all of 'em down by the same
degree (like we were discussing in another thread):

http://www.braindoc.de/vst/ChannelTool.zip

Pretty interesting pitch shifter with up to 8 voices - VERY
CPU-intensive on settings with the higher #'s of voices, but
can give you some kinda cool flanging/doubling/chorusey EFX.

http://www.braindoc.de/vst/ShifterBank_v1.0.0.zip

There's a handful of other freebies on that page as well, but I
don't have any use for them, so I didn't try 'em, except for one
and my warning in that regard is:
WHATEVER YOU DO.... do NOT download his Stereo Enhancer plugin
found on that same page - unless you have like a 5GHZ CPU - I
tried it, locked up completely to the point of having to do a
hard reboot... inserted it again, this time on an empty project
& found that it took up 60% of my CPU cycles all by itself.
Just a little too much to be practical :D

I'll try & compile an up-to-date list of good ones & post it
here.

Neil

Yeah, but of WHAT???

(i'm afraid to ask exactly how you meant that, Martin   LOL!)

:D
