>Whoa. Neil, buddy, you just lost my vote for president. ;^)

I sincerely hope our current leadership does not think like that.

Your approach has been tried in Israel on a smaller scale. There they  
bulldozed houses of families of suspected bombers. Didn't work. The  
resentment grew and consequently more bombers appeared. It may have made  
it easier to recruit bombers, not the intended consequence.

The only way your idea would "work" would be to nuke every city on the  
planet, which is what your "solution" would tend toward as the mutual  
resentments grew. Then the problem would go away, so you're partially  
right, although no human would be around to enjoy the ensuing  
radioactive calm.

That whole approach is a "wizard's apprentice" idea. Simplistic but  
fraught with unintended consequences.

Cheers,

-Jamie K  
<http://www.JamieKruz.com>

PS. We don't need to make this into "Return of the Crusades." We ought to be a bit more enlightened at this point in history.

Rod, I'm veery sorry, the DAT was actually a Tascam DA 30 !! Anyway, my goal is to check if the 442 modified by an authorized (former) Ensoniq laboratory works or not, 'cause, as I wrote, the first attempt without a Smpte to MTC converter turned solely to crashes

and noises...

I've called right now a couple of pros here in my region : one said there would be no need of any converter because the sample rate signal passing through the spdif would be enough to record digital data; the other said that is very likely that the manual is right, because he said without the converter the square waves of the master and the slave wouldn't likely be in phase, turning to conflicts...

I think #2 is right, and I'll look for the JL Cooper suggested by the friend Andy Pow

Thank You

AHA! So you can hear him too!! See I knew it wasn't just me!

;o)

Cheers,  
Kim.Hey Jamie,

That was just a generalized response to the reactionary approach the previous poster had taken. The point was, I really think (and did before the war talk started) that there is more to the story than has, or probably ever will be publicized - we'll never know for sure either way.

The poster had come across sounding like Iraqis were doing just fine before we went in but are a mess now because of us and no one else - and the poster doesn't like Bush (to each their own of course). I'm sure the hundreds of thousands of Iraqis that were tortured or killed under Saddam's regime might disagree about their apparent well-being at the time. Certainly the country's infrastructure and economy were better off before the war. War is devastating no matter how you look at it.

Both sides of the circumstances sadden me - tyrannical rule is more than anyone should have to endure, and certainly would be more than most Americans could bear in our desire to have no one guide, much less restrict

our personal decisions; and if war is the only way to be free (as our predecessors found in the 1700's), freedom comes at a high price. As a country we've paid such a price many times - Rev. War, Civil War, WWI, WWII, Korea, Veitnam, etc. It never gets easy. It is never glorious. My hope now is that the outcome for the Iraqi people is freedom to make their own decisions about who governs them and how - free from tyranny, and free from anarchist insurgents. I'm just not sure many people think there is any cost worth paying anymore. After all, \$2.39 a gallon or which movie to go see is about the highest cost most people have to weigh out here in the US (by comparison to many other countries with far greater struggles in their pathes). With such a gift of opportunity for life here comes a great responsibility, one that I think we are losing perspective on as a country (as much of the world is also). Sometimes we will take on too much sho

reat, let's keep in touch on that. Also, if you're going to be heading to Denver give me a shout. If I'm heading for the Springs I'll let you know.

You're right about not knowing everything. A lot of arguments made here hinge on speculation. War is often sold as the price for freedom, but the sellers are not always correct or even sincere. As responsible voters we must be able to see through smoke screens, rationalizations and lies, but that's often hard except through hindsight.

Past experience teaches us to carefully examine the many motivations for war, not all of which are in the same lofty category as "the price of freedom." There are other ways to help ensure freedom that are less destructive and have less damaging consequences and those, too, must be considered. Violence breeds violence and that consequence must be taken into account as we try to find the wisest, most effective course of action toward the better world we all want. Complacency is not an option.

Cheers,  
-Jamie
