I'm getting a midi patch bay in here in the next few days. It will allow midi merge on channels 1 & 2.

Is this something I should even do?

Since I can do it, will I die if I don't?

---

If you merge MIDI, you risk creating a tear in the space-time continuum....

....so to answer your question: yes, in your case, you would indeed have to try it.

:)

DJ,

There was a time back in the late 80s when I was merging the note data from a keyboardist and a drummer playing Yamaha pads into an Amiga. That was fairly fruitless because of the Yamaha pads sucking.

The only other time is when I wanted to do sysex dumps to and from synths so my synth editors would work. The Amiga would boot and three editors would send a 'get all' command at start up. I merged those channels to get it to happen.

I'd say you probably won't need it unless you have more hardware than in/outs AND they can't coexist running midi connectors serially between them. =20

Huh?

The short answer is probably no but maybe.  
Tom

IOW, you can do it, but why would you want to?

only if you're truly happy with the mix of the merged channels  
otherwise no. you'll find that some inst. will sound better through  
different DI's just like other direct input instruments.

It is useful if you are using more than one controller, such as a keyboard and a guitar controller or percussion controller and you don't want to waste time plugging in a different cable all the time.

So if I had two computers running Cubase and one Houston controller, could I merge the midi data from both DAWs to one controller.....man that sounds so totally impossible and crazy that I'm gonna have to try it.

;o)
