No, and I am using XP pro. It was my understanding that with XP I didn't
need to do the i/o or other W98 related tweaks(other than turning off HT).
I did check my Vcache though and it was 8196.

Another possibility is something *could* be conflicting
> and basically hanging when Paris is trying to process... if you don't use

Yes, this has all been done from a list I got from "tweaking xp for audio."
It only seems to happen when I am adjusting aux FX during playback.

Hope this
> helps and Good luck.... ~ Ed

Thanks Ed

Edna

Im just beginning to wonder if there's something amiss in the project =
itself. I also have two other projects and have never had the error =
with them, although I wasnt doing a lot of fxs and adjustments of fx =
during playback?? =20

Edna,

I really don't have any better answer for you. Control S is your =
friend though.

Maybe you found another Paris bug? Like grabbing too many tracks in =
the=20

editor and changing their lengths together? That one gets me once in =
a while.

Lesson is Control S, Cut all tracks needing editing to the exact same =
length,

Control S, then do the edit, then control S.

I wish I could be of more help. Maybe you do have an issue with Paris =
and your computer.

My assertion failures usually have something related to .dll in their =
title.

Tom
