Hi,

I have DJ's p2B-LS motherboard with mmx 350 PII cpu, vintage right ?

This is for Lexicon core32 and two DSPFX cards and one Pulsar card !!

So now switching in beetween windows there is much latency ...

Memory is 192 mb and OS is Windows Me.

Don't please advice to get a faster computer !!

Just advice if possible what would cure that !!

Thanks

Dimitrios
