I have the M3000 and love it. It's very clean. I do mostly acoustic stuff  
myself.

love them on drums & certain things) and am thinking to

enough advantages over the M3000 to justify the higher price tag,  
when what I basically need are nice reverbs for acoustic music.  
Or is there another killer unit out there that might accomplish  
this (for, say under a grand)?

Thanks,  
Dale

The Kurzweil Rumor might be all you need.....if Kurzweil is your choice.

Another vote for the M3000-

If you like the Paris EDS plate reverb at all, you will  
LOVE the M3000- it is so unobtrusive but real.

However, my friend Darren Rahn makes a living as a producer,  
among other things, and really loves the KSP8...

Chris

I've heard the KSP-8 and it is very nice and natural. Brian T sold his =  
M 6000 as I recall

after substituting it's reverbs with the KSP-8. I think that was the =  
deal anyway.

Kurly Rumor is serious bang/buck if reverb is the only thing you're =  
looking for.

I love my M3000. But depending on how you plan to use it, a good convolution reverb might work as well for you and cost less.

The Kurzweil is much more versatile. Rooms and plates, halls are all winners.  
The TC is 2 trick pony in comparison.

I have both units interfaced on my mix rig all the time. If I had to give up one, the TC would get the walking papers, even though I love it, too...:)

Is "convolution reverb" hardware or a plug? If the latter, my options may be limited since I'm on a mac
