I've got 6 x of their SRC 2496 sample rate converters. 4 of them are in use.
Two of them are on their way back for replacement under warranty.

Nope..just due to wonkiness.

there is an inherent wonk factor with Behringer.

That was very painful to watch. I got through about 1/3d of the way through.

I could stand no further manipulation.

I've seen these videos in the past. I don't see the dirt floor factories, but they do exist. It's great that you can now buy a two dollar rubber hammer that's made in China, but we are paying over three dollars for a gallon of gas. Being that I live in Detroit, the motor city, a manufacturing city / state, I have to say, free trade is not free right now, it costs American jobs. It is costing us our standard of living. I would encourage people to stop buying Chinese products, or at least slow down. Everybody should be writing their congressmen about changing our trade agreements.

Just my .02

Three bucks for a gallon of gas???

Sheesh, in Australia petrol has hit US\$5.00 per U.S. gallon. (3.8 litres).

But if you think that's bad, my housemate just got back from the UK, and it's over US\$8.00 there.

Live it up!! Me??, I'm gonna buy me another rubber mallet...:-))

Hmm...look at Mackie, an American firm where their owners saw more \$ in China too. Sorry to say but investments of capital have no native country at all, especially not when the world is being globalized the way it is. Not any congressmen in America, or else in the world can change that.

And now we have Russia on good way back in time for the people, with Putin that's now going in front with the power with economic help from Russian oil and gas and also with good help from his old KGB friends from the old Sovjet. Putin is now controlling some of the

biggest oil and gasfields in the world. With the oil and gaspower, Putin can really set Russia back in position for the top in the world. The western world are extremely needing Putins oil and gas and is doing nearly everything to be friend with him. If we're talking about a form for worldpower-poker here, I can say Putin now seems to have the best cards on his hands to get back the power of the world, as it seems that Bush and his administration now have destroyed for America with their "Texas-pokerplayings" around the world the last 7 years, after the Sept. 11 attack.

It's not many weeks ago since Putin demonstrated his new military power right besides the Norwegian oilproducing installations in The Nort Sea, right out from here where I'm living.

The Russian military activity have been dead in the North Atlantic Ocean since the collaps of Sovjet. Now it's like old cold wardays again are coming here. So it shows up really well that Putin are demonstrating that he now have the power to show the world he can also tackle political problems outside Russia. By the way, the Russian Navy with both ships and aircrafts that demonstrated their power here, have sailed into the Meditterranian Sea, just showing up that they again can both protect or destroy.

The world need oil and gas, so worldleaders are standing in cue to be friends with Putin and kiss him. Also Bush have been over in Russia to give Putin some friendly kisses and great smiles. So Putin and Russia must have some kind of things that the western world extremely well need for the future, to build up a form for "friendship".

Chinese workers are "stealing" western jobs, not only from American people but from the whole western world, but with money from the western world's investors, that only have money and power as their native countries. Uli Behringer is just one of them that saw a new way to sell, as Jamie Engen, the President of Loud Technologies, also knows a lot about.

Just my 2 cents sitting outside USA and also getting political informations from different places in the western world.

Sorry, couldn't hold me from the political arena after some years of saying nothing;-) Generally, I should wrote this in General, but it seems General is more dead then alive;-)

Good observations Erling - didn't know about Putin and Russia's military build up - interesting.

Imho, a globalized economy can be fine, albeit an adjustment for both sides - for established countries, it can mean lower quality goods, lost jobs, etc. But on the flip side, underindustrialized countries have to improve quality and working conditions/compensation to keep workers at home (look at Mexico). China seems to be improving slowly. At the same time, the US and other countries have to establish our own balance of overseas manufacturing vs. what jobs we keep at home.

Also imho, oil is possibly the single most detrimental factor to this balance - it's like getting a kid addicted to candy and then telling him to exercise daily, eat right, and lead a balanced life, while slowly feeding him more and more costly candy to keep him on task. Doesn't work.

The world needs to move away from oil as an energy source. It isn't renewable unless we live to be 10,000,000 and our population never grows (another problem that needs to be addressed - growth as a prosperity goal - it's a dead end as well).

I'm seriously hoping to be able to go hybrid with our next cars. With US gas prices projected to pass \$4/gal this summer (I know that's not much compared to the UK, Aus, etc), it's long past time to make changes. At this point, I think we are lessening the damage, not solving a problem, so we as a civilization are living on borrowed time.

Just my .02. Sorry to further extend the OT drift of this thread.

BTW - couldn't get the original link to work, but I found the videos on YouTube - interesting. Can't say I like Behringer more, or less - just interesting.

Also interesting, apparently the new Euphonix controllers are manufactured in China - that's how they went from a \$16k controller down to a \$1500 version.

Regards,
Dedric

I only own one piece by Behringer, a MIDI pedal board for my guitar rig,
and it manages to have 2 bizarre problems: 1) somehow the control pedal
assigned to volume actually makes my Tonelab preamp squeak when I adjust
it. How? Beats the crap out of me. 2) The same pedal does not go to
zero; in other words at full off, it's still partly on.

And one of the LEDs is intermittent.

BUT IT WAS PRETTY CHEAP, and it is the only one on the market, so I had
to have it. Oh well, maybe the new factory will improve things. Don't
forget there was a time when Japanese products sucked too. There was a
law passed that any Japanese product had to say "Made in Japan", to warn
consumers that it was probably substandard. Now that is an emblem of
quality.
