I think this is the fastest available 939 CPU, unless I wanted to OC a lower cycle AMD 64 or Opteron which doesn't have a fixed multiplier....which I don't.....but if I did, I think the multiplier on this CPU is fixed so I can't, because it won't, but since I don't, then I won't, thereforewell.....anyway.....we'll see how it goes.

;o)
