hell, for me with anything. no it's with dp, pt and logic. what used to occupy 60% plus on my old POS now takes 5% with half the ram. but i may get back into recording if the next few days of testing (and

increasing the ram to 6 gbs) will let me know what;s up. so far, i'm pretty encouraged.

dual core 2.3, w/10.4.5 and logic pro 7.2

Hey Rick, that's good to hear! Is it the new Intel laptop or iMac?

Is that loop test with Logic or with DP? If it's with Logic are some of those plugins soft synths? If some are soft synths have any randomly quit playing?

Apple's Logic tour is coming to Colorado in a couple of weeks and I'm

getting way tired of that bug and gonna bring it up.

Anyway, it's great that you finally have a working Mac. Aside from the bug I mentioned with Logic, it offers a pretty capable environment.

So now that you have finally have a working system what's your next recording project?

Cheers,

-Jamie

no it's a g5. if i were even to buy an intel mac it wouldn't be until they were out for a couple of years for studio use...i'd be afraid that i'd be buying something like i had in the fs800...disaster.

the test was with logic as all the files for dp have waves, drumagog and other plugs that need to be authorized. my partner has the iloks for those in arizona at the moment and will be gone till the 3/27.

as far as sids with logic goes i usually convert or record through outboard gear the synths and use them as audio tracks once i get the part right.

my next project...i don't know. for the last year plus i've been letting the studio pay me to stay out of it other than as a janitor and tech head. for me right now i think i'd like to specialize in acoustic stuff and leave the everybody is playing the same mostly bad

to scott.

for the last few months i've gotten back into song writing and working on my playing chops...okay, slops is probably more like it but i really missed do that. i'm trying to replace the voices in my head with melodies.

Man,

I thought you were talking about running Paris on your new Mac.

Of course Logic 7x works with the G5(s).Duhh :)
