Me too.I'd like to have 4 x LCD's mounted in a desk, face up at an angle approximating the angle of a mixing board.

Mic,
Are you doing this Mic? I've wanted this since the Sony DMX R100 came out. What does it cost for a touch sensitive screen? Do you need a pen or can you do it with your fingers? Do your 17"s mimic the 19"s?

Take a pic I have to see!!!

Tom

"Mic Cross" <crzymnmchl@comcast.net> wrote in message = news:43ff5634\$1@linux...

Hi DJ,

I have my touch sensitive stuff working. 4 * 19" LCD vertical,=20 and 4 * 17" LCD touch sensitive at 45 degree angle below them.=20 Only single touch at a time, but adjusting sliders, sweeping=20 frequencies on the EQs etc - this is the interface of the=20 future. Great fun manipulating the UAD stuff also.

Mic.

Hi DJ,

I have my touch sensitive stuff working. 4 * 19" LCD vertical,
and 4 * 17" LCD touch sensitive at 45 degree angle below them.
Only single touch at a time, but adjusting sliders, sweeping
frequencies on the EQs etc - this is the interface of the
future. Great fun manipulating the UAD stuff also.

Mic.

Hi Tom,

Yup have it all working - touch sensitive mirror the verticals - have the verticals so I can sit back and see what is going on. Can use finger or pen. I constructed my own screens I like Dell LCDs (don't like Dell :-), so lurked on ebay for a good deal and then bought Magic Touch embedded (not overlays). The embedded fits right against the LCD screen after the bezel is removed - this is much better than the overlays which go over the bezel and leave a gap - this decreases accuracy. Multi-touch would make this the perfect environment as it is so intuitive using your fingers (did I say that? :-).

Gonna follow up on DJ's link.

Mic.
