I can't believe this one but . . .=20

I've had 5 cards in a 13 slot Magma for years. Now it won't start up and keep running. This began tonight as I tried adding Mec #2 to a 1 Mec setup. The Magma would power on for a split second then stop. I'm thinking power supply. It might still work with all 5 cards and 1 Mec if I baby it.

Once it's off I have to unplug, wait, replug and start again. Maybe it will start up with one Mec then. I thought there was=20 a auto shut off mechanism built in to the Magma. I didn't see anything about that in the manual.

???

Why Me???

I choose Polesoft Lockspam to fight spam, and you?

David,

I can get it to boot fine with one mec. Once I add another (I've tried two and two cables) it shuts down. This is just the=20 scsi cable no power on on the Mec's. The Magma will not power up. It starts then stops right away. It's like it's seeing a short.

Would you agree the 400 watt power supply is all done?

I'm wondering if I scorched something in the Magma too?

Any ideas?

Tom

Tom, that totally sucks!

My Magma PS went bad, too, but it was completely dead - wouldn't start at all. No sounds, no fans, no nothin'.

If you do replace it, just make sure you get a PS that can handle having no 12 volt load. You may have to get an older one.

Good luck!

Mike,
What power supply did you replace yours with?
I'm not sure how to find out which will and will not
handle 'no load' on the 12v side.

I'm looking for something hefty in the 600watt+ range.

Tom

I would contact Magma and see if they have any recommended replacements.
Failing that, you may have to mount a hard drive in the case to use
some 12V

David.

Hi Tom,

I had an older one I bought from pcpowerandcooling.com. If you email them, they will be able to help you with that. They used to sell "referbs" of old models from their site. I'm not sure if they still do.

Good luck!

Mike

I would contact Magma and see if they have any recommended =
replacements.=20

Failing that, you may have to mount a hard drive in the case to use=20
some 12V

David.

I've got an old 13 slot Magma here with a blown mobo and host card. The PSU does work however. You want it? It's yours for the shipping.

Deej

David,
The supply I pulled from the Magma did not look stock. it
looked like a cheap 400 watt mongral.

I just bought an Antec 550. It is modular in that you only attach
the cables that are needed. It seems to me that that supply will
be able to run with or without anything attached to it.

Does my thinking stand to reason?
Powerlessly,
Tom

face the front.

I think mine's the opposite judging by my master card placement.

Everything is broken it seems.

Tom

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:470d9f41\$1@linux...

I can't believe this one but . . . =20

I've had 5 cards in a 13 slot Magma for years. Now it won't start up and keep running. This began tonight as I tried adding Mec #2 to a 1 Mec setup. The Magma would power on for a split second then stop. I'm thinking power supply. It might still work with all 5 cards and 1 Mec if I baby it.

Once it's off I have to unplug, wait, replug and start again. Maybe it will start up with one Mec then. I thought there was =20 a auto shut off mechanism built in to the Magma. I didn't see = anything about that in the manual.

???

Why Me???

I choose Polesoft Lockspam to fight spam, and you?

Another thing,
My Magma has not only the 20 pin mobo power connector
but 3 x hard drive type connectors that go to the Mobo.
Not sure if this means anything.
Tom

I hear ya Aaron. I am going to trouble shoot the eds cards again then I'll send the Magma to Magma. If that doesn't answer some=20 questions then Chris will get the call. I hate to bother him with this trite Paris crap. There'd be a lot of shipping involved there too.... Thanks for the tip.

It'd be cheaper and more fun to ship Chris here than ship this pile to him.

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:470f1c52@linux...

I hear ya Aaron. I am going to trouble shoot the eds cards again then I'll send the Magma to Magma. If that doesn't answer some=20 questions then Chris will get the call. I hate to bother him with = this trite Paris crap. There'd be a lot of shipping involved there too.... Thanks for the tip.
Tom

Another thing,

My Magma has not only the 20 pin mobo power connector
but 3 x hard drive type connectors that go to the Mobo.

Not sure if this means anything.

Tom

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:470ec023\$1@linux...

Most Excellent Fix It Guys,

New problem. Just installed a new Antec 550 watt supply.

Powers up nicely in the Magma. It will run with 5 EDS cards
then shut off just before XP boots and screws the whole shootin' =
match.

I'll double check seating of the cards but what else would have =
made even

the new supply to croak? Fans are cooling well too.

I'm thinking I have a broken EDS then ? Maybe 3 . . . ? The =
Magma?

Damn. Are there Magma drivers? If so I'd need older ones. The =
Magma

tech was almost laughing at how old mine is. It has a slot on =
the far left

for the Magma card. The newer one's slot #s go 1-13 rt to left =
as you face the front.

I think mine's the opposite judging by my master card placement.

Everything is broken it seems.

Tom

Hi Tom,

I have the same old Magma, and it doesn't require any drivers.

I'd try booting Windows XP with no EDS cards in, then one, then two, etc., until you can find the problem. If it is the bridge chips in the Magma, I believe Windows would fail even if no cards were in it. You may want to test it with another PCI card in it just in case I'm wrong about that. It sounds to me like a bad card that is throwing the PARIS driver for a shit when it tries to initialize any 442s that are attached (that happens on start up).

Good luck!

Mike

Hi Mike,

I think Windows will boot fine, at least it used to with all 5 cards in it. Now it chokes as soon as I attach a scsi cable to any of my three new working mecs. It didn't a couple of days ago.

I'm digging deeper into the way the cards are seated now. I will check the Magma with one card and one interface at a=20 time. Maybe the scherzo drivers are screwy from removing=20 and reinserting the cards? =20

This is amazing how one little thing can ruin a good business. Well maybe it's 10 little things but. . =20

Hi=20
Tom,

I have the same old Magma, and it doesn't require any=20
drivers.

I'd try booting Windows XP with no EDS cards in, then =
one,=20
then two, etc.,
until you can find the problem. If it is the =
bridge=20
chips in the Magma,
I believe Windows would fail even if no cards =
were in=20
it. You may want to
test it with another PCI card in it just =

in case=20

I'm wrong about that. It
sounds to me like a bad card that is =

throwing the PARIS driver for a shit
when it tries to initialize =
any 442s=20

that are attached (that happens on
start up).

Good=20
luck!

Mike

 =
Maybe it=20
will start up with one Mec then. I thought there =
was=3D20
 a=20
auto shut off mechanism built in to the Magma. I didn't see=20
=3D
 anything
 about that in the=20
manual.

Subject: Re: Magma problems HELP!!!!!!
Posted by [EK Sound](#) on Fri, 12 Oct 2007 18:27:39 GMT
[View Forum Message](#) <> [Reply to Message](#)

Try hooking the MEC's up but NOT hooking them to A/C... as in "off"

David.

Hi Tom,

Hmmm...does it fail when windows starts if the MECs are connected or when PARIS starts?

The Magma power supply just stops after about 45 seconds
so windows freaks and won't finish starting up.
"Mike Audet" <mike@....> wrote in message news:470fbd61@linux...

Hi Tom,

Hmmm...does it fail when windows starts if the MECs are connected or =
when

PARIS starts?

David,
I think I've tried that with the same results but let me try again.
I'm just about to hit the studio.
Tom

"EK Sound" <ask_me@nospam.net> wrote in message news:470fbe30@linux...
Try hooking the MEC's up but NOT hooking them to A/C... as in "off"

David.

Windows XP with no EDS cards in, then one, then two, etc., until you can find the problem. If it is the bridge chips in the

Magma, I believe Windows would fail even if cards were in it. You may want to test it with another PCI card in just in case I'm wrong about that. It sounds to me like a bad card that is

throwing the PARIS driver for a shit 442s that are attached (that happens on start up).

Good luck!

Mike & Tom Bruhl" <<mailto:arpegio@comcast.net>>

<mailto:arpegio@comcast.net>

wrote: Most Excellent Fix It Guys, New problem. Just installed a new Antec 550 watt supply.

Powers up nicely in the Magma. It will run with 5 EDS cards, then shut off just before XP boots and screws the whole shootin' match. I'll double check seating of the cards but what else would have made even croak? Fans are cooling well = too.

I'm thinking I have a broken EDS then? Maybe 3 . . . ? The Magma? & Damn. Are there =

Me???

Got everything out of magma, reseated it's card.
Booted computer fine with nothing in magma.
Tried one eds, computer still booted fine.
Tried booting with Mec attached but off no probs.
Tried with mec on booted fine but am back to no
clock or modules showing in Mec with Paris started.
I forgot to disattach the second Mecs clock from the first
and it was off. It may be why but I doubt it.

I'm off to a crazy weekend but at this point am thinking the Magma is toast. ? ? ?

I'll be back to hear your replies in 6 hours or so.

"Tom Bruhl" <arpeggio@comcast.net> wrote in message = news:470fc436@linux...

The Magma power supply just stops after about 45 seconds so windows freaks and won't finish starting up.

"Mike Audet" <mike@....> wrote in message news:470fbd61@linux...

Hi Tom,

Hmmm...does it fail when windows starts if the MECs are connected or = when PARIS starts?

stop. I'm thinking

power supply. It might still work with all 5 cards and 1 Mec

if I = baby it.

Once it's off I have to unplug, wait, replug and start again.

Maybe it will start up with one Mec then. I thought there was a auto shut off mechanism built in to Magma. I didn't see anything about that in the manual.

Why Me???

BR&BR I choose Polesoft

card. The newer one's slot #s go 1-13 rt to left as you
front. think mine's the opposite judging by my master
placement. Everything is broken
it seems. Tom Bruhl"
href="mailto:arpeggio@comcast.net">arpeggio@comcast.netmailto:arpeggio@comcast.net">arpeggio@comcast.net
wrote in message news:470d9f41\$1@linux... I can't believe this one but .
. I've had 5 cards in a 13 slot Magma for
years. Now it won't start up and keep running. This began
tonight as I tried adding Mec #2 to a 1 Mec
setup. The Magma would power on for a split second then
I'm thinking power supply. It might still work with
all 5 cards and 1 Mec if I baby it. Once
it's off I have to unplug, wait, replug and start
again. Maybe it will start up with one Mec then. I thought there
was a auto shut off mechanism built in to the Magma. I didn't see
anything about that in the manual. ? ? =
Why? Me??? I choose =

Rick,

I just replaced the power supply in the magma yesterday. The mecs are = brand new/used to me.

I have two others to try but I'm afraid I'd be toasting them one by one = somehow.

This is so outlandish I don't know what to think anymore.

Tom

Subject: Re: New problems

Posted by [rick](#) on Sat, 13 Oct 2007 09:16:32 GMT

[View Forum Message](#) <> [Reply to Message](#)

sorry i hadn't read all the other posts but even new ones can be bad..

i've never used a magma so i'm not familiar with their hookup protocol.

can you put a meter on the power feeds to see if their output is correct?

On Sat, 13 Oct 2007 02:06:58 -0400, "Tom Bruhl" <arpegio@comcast.net> wrote:

My tech probably can.

"rick" <parnell68@hotmail.com> wrote in message =

news:4131h3prqigrc2lm11ut4lfu3lcb160n96@4ax.com...

sorry i hadn't read all the other posts but even new ones can be bad..

i've never used a magma so i'm not familiar with their hookup protocol.

can you put a meter on the power feeds to see if their output is correct?

On Sat, 13 Oct 2007 02:06:58 -0400, "Tom Bruhl" <arpegio@comcast.net> wrote:

Fans are
cooling
& well
& too.
I have a broken EDS then ?
& Maybe 3 .
The Magma?&Damn. Are there Magma drivers?
If so
& I'd need older ones. The
Magma&tech was almost laughing
& at how
& old mine is. It has a slot on the far
=3D3D&left&right ;for
&the Magma
card.
The newer one's slot #s go 1-13 rt to left as you
&=3D3D&face
& the front.&I think =
mine's the
opposite judging by my master
&card
placement.&Everything is broken =
it
&
seems.&Tom& ;& "Tom Bruhl"
