[View Forum Message](#) <> [Reply to Message](#)

Well, I went to a jazz gig last night. Paul Grabowsky and a bunch of other dudes who's names I probably would know if I knew as much about jazz as I'd like to. ;o)

So this week's whim for me is that I want to switch all my musical pursuits to jazz. I mean rock is all so yesterday. ;o) Actually, it's not a sudden whim for this week. It's been brewing for some time, but I've been avoiding the switch because it sounds like too much hard work.

Part of the problem is that jazz musos, or good ones at least, are so good. ;o) I mean when you compare the keyboard parts in the average top ten tune, to the piano part in an average jazz tune, there's no comparison. One is decidedly more difficult, more advanced, and more clever. And harder to play.

And for the last 20 years, when I've wanted to learn a tune, I've listened to a recorded performance of the tune, and then worked out some parts to imitate what I hear, but with jazz the expectation is different. For starters most recorded versions are incredibly personalised to the player. If I copy what I hear on a record, I'll just sound like somebody emulating that particular recording, where the expectation is that I should be doing my own, different, original version. I mean I'm quite capable of doing that, but I need to learn the tune somehow, and while I have some ability to read charts, I'm hardly an expert at it, as I've found that working off the actual recordings is generally far more effective for pop/rock music. Not so for jazz it seems.

Anybody know of somewhere where I can download copies of jazz standards "as they're written"? A reference point as to how the original melody goes before people start "doing jazz" to it? Bet there's no such thing... ..would be handy, for me at least. MIDI files even might be ideal.

And of course I don't actually know any real jazz musos. I know some people who know a bit of jazz, but nobody where I'd say their expertise is in jazz.

I think I just need to bite the bullet and start putting some serious effort into improving my chart reading skills...

Cheers,
Kim.

You might try googling for jazz fake books. These usually have melody, lyric, and chords.

"Edna" <edna@texomaonline.com> wrote:
>You might try googling for jazz fake books.

I actually have a copy of "The Real Book" already, which of course has much of that. I guess over the years I've been a sight reading slacker. ;o) I mean it wouldn't take tthhhhhhaaaat much effort I guess to learn using a method like that, but I'm just not all that comfortable with it, given I'm not familiar with the style, and don't know the tunes. I have learned quite a number of classical peices by sight reading, but at least I have classical training.

...and it takes me much longer than learning off a recording. Though I guess that's also because normally the peices I learn from recordings are very simple pop tunes.

I can see I'm going to have to resort to The Real Book and other fake books in the end anyhow. This is just my last cry out saying "Nooooo, I don't want to have to put any effort in!!". ;o)

...but obviously if I want to move forward I'm going to have to get off my lazy butt and work on my chops. ;o)

Cheers,
Kim.

We used to use them for gigs when we didnt already have an arrangement of a requested tune. So they came in handy for that. Jazz theory books would be a help to you as well. I used to have John Mehegan's Jazz Improvisation series (destroyed in a recent house flood) which was used in NTSU jazz classes (a big school for jazz in Denton, TX), and a book by Ed Haerle (a teacher there) on jazz voicings that was very good, but that was some time ago, may'be something better available now. And of course just listening to the kind of jazz you want to get into along with theory will help you to understand whats going on musically, which, IMHO, is more important than the music reading.

Thanks for those book suggestions. I'll definately google them when I get a chance. I do need to polish up on some jazz theory. The extent of my jazz knowledge is basically a few tips from my High School music teacher back in the late 80's, who did study jazz at University. I could certainly use some info on the finer points.

Certainly, natively I learn by ear. I learned via the Japanese Suzuki method. So my first point of call will be to listen to the style at least that I want to play, which is also why i've so heavily relied on doing things by ear over time. I already put the call out for a good jazz theory book last christmas, and my brother bought me a book, which is probably a good start, called "What to listen for in jazz". Obviously he figures, since I'm such a "by ear" muso, that that would be a good approach. It comes with a CD full of jazz classics, and takes you through some of the tricks they use, and I had forgotten about that... it's on the bookshelf somewhere... I must dig it out and have a listen.

But I also need a good theory book. I searched the web, and there was some site called "learnjazzpiano.com" or something, which had some theory, but it really didn't cover anything of note that I didn't know.

Half my problem is that I'm just lazy. ;o) If I bother to put some effort in I'm sure I'll start to make ground fast.

Cheers,
Kim.

There's some gold.

The play alongs seem cheaper here though:

http://www.grothmusic.com/cgi-local/SoftCart.exe/online-store/scstore/c-Hal_Leonard_Jazz_Play_Alongs.html?L+scstore+nhmh 0092ffea9cea+1145665376

...which is where I was right before reading your post. But there's some nice looking books on that link of yours also.

Cheers,

Kim.

The play alongs are great for me (bassist.) I have the Giant Steps, Herbie Hancock, etc.

You can just pan them to where you only hear the parts you need and play along (duh!) and it's a great way to learn, especially if you're an "ear" player.

Yeh I'm thinking I might have to invest in a couple. And they come with books too, so I can practise my chart reading at the same time.

I'm thinking I can kill two birds with one stone if I buy the 16 volume pack:

<http://www.grothmusic.com/cgi-local/SoftCart.exe/online-store/scstore/p-HLJP16.html?L+scstore+nhmh0092ffea9cea+114566551> 1

First, I'll have heaps of material to practise to, and second, I can sit down and just press go, and read the charts as I play through disk 1, then 2, then 3... to 16. Then I can get some serious playing practise, and some serious chart reading practise at the same time.

Hey, this is cool. I'm getting all excited. :o) Maybe I should buy just a couple first to check it out though...

Cheers,
Kim.

Why don't you attend a few more "Jazz Nights", talk with a few players and find a one who's willing to give you some lessons.

You could even swap recording time for them.

I have a good friend who did just that and his guitar playing has steadily improved, in all genres

That's not a silly idea.

There's another jazz club a bit closer to home which I'm hoping will become a bit of a local. The one I went to last night is in the city centre, which is about 15 minutes drive, whereas this other one is in Fitzroy, which is about 5 minutes drive, or an easy ten minute tram ride and short taxi home. Hence I'm hoping, if it's any good, it can become my "jazz local". I haven't been there yet, but I'm hoping to check it out some time next week if I get the chance.

If I get comfy at this other club, the calibre of muso will likely be a little lower, but they should be fairly approachable I imagine. Mind you even at Bennett's Lane (last night) the players were just wandering through the audience, and I could have easily spoken to them.

On the other hand, I spent a couple of hours reading jazz theory earlier today, and, like last time I read jazz theory, I found that I actually am already pretty comfortable with all the basic theory. What I need is to do some more study on the actual great players, and specifics of their styles, so that I know more about the finer details. 90% of the hard work of learning modes and harmonisation is done. I'm starting to think that what I need at this stage is more a history lesson.

I might spend tonight reading I think...

Of course a good teacher would be able to look at my playing style and go "Ahh, what you need to know is THIS!". ;o)

I just haven't really had a music lesson since, well, since I was in High School actually. I'm kinda used to working everything out myself. Mind you, if I found the right person, probably 5 lessons in the right direction could make some pretty big strides. The thing is I would need to find the right teacher.

Cheers,
Kim.

Thanks for that. Will have a look tonight. Soon as I finish reading this
other one I'm half way through.

Cheers,
Kim.

My buddy had never taken lessons before but he found it quite enlightening....particularly voicing of chords, basic theory (which you have) and learning tricks for solos i.e. scales and relative positions etc.

Have fun

Don

I know you are a guitarist. If you are interested in pursuing this on guitar, this is the ticket:

www.optekmusic.com

Absolutely unbelievable learning tool.

Kim, the only way I learned how to play jazz was by listening to the =
cats that I really dug and transcribed tons of solos. I practiced as =
many arpeggios as I could find or create with my own musical sense, in =
every key of course, this is a must, learned all the chord scales, in =
triads, sevenths, and 4th patterns, especially the dominant ones, =
(they're more complex and were harder to hear for me), Altered, =
Diminished, Harmonic Minor, Melodic Minor, etc., it's endless my friend. =
It's all repetition in the beginning, but eventually you begin to find =
your own voice and things start to fall into place. It only took me =
about 25 years :0 and I'm still searching and analyzing other's solos. I =
play the sax and recently the steel drum which has made me more aware of =
comping. Keyboard is challenging in that you comp and solo =
simultaneously. If you want to do this on piano, you're on the right =
footing already if you're listening to cats like Bill Evans, Oscar =
Peterson, Chick, Herbie, George Shearing, etc... Transcribe and shed =
like hell.

Cheers and good luck,
Rich

Kim-

You've been given more material to go through than you likely can get through in a lifetime, but go to it! Here are a few helpful hints...

If you're just comping behind a soloist, you can go a long long way by becoming familiar with the thirds and sevenths of all the major and minor chords. Also think of yourself as a horn section. Play as little as necessary to get the harmonic structure across.

I assume you're familiar with the circle of fifths. It is the framework upon which songs are constructed. Some classical players I've run into who didn't

have theory play for years and years without really grasping this.

There's a great trick (which works on guitar as well as keys) where, as you go down the circle of fifths, the third and flatted seventh of a chord can both go down a half step (or a fret) to become the flatted seventh and third of the next chord.

If you're not already, become familiar with the I, IV, V, iv, etc. method of chord representations. Transcribe progressions into this form, and then you can easily move them to other keys.

Practicing ii V I progressions in all keys is good- even mandatory. Try all manner of ii chords (minor, minor 6, minor 7) in all inversions and see if you can find your way chromatically from each ii to the V chord. All kinds of cool things to be discovered.

Keep us posted how you're coming. Some of us have been working on this for decades...

I remember vividly watching a good player, late 70s, back when I had no clue. (I was playing bass and reading off his chart.) As the band was playing, he would scan the chart and just sit at the keyboard, waiting for the moment when a chord was needed. Then, blam! It was like magic. He knew just what to play and when.

-steve

Or, simply ignore everything that's been posted in this thread, grab a fretless bass, and wail away with complete disregard as to whether you're playing a scalar note or not, and just maintain that you prefer to "play on the outside".

:)

Yeh, I have no doubt there's plenty I don't know, if I can find the right teacher.

Cheers,
Kim.

LOL! Now that sounds much less like hard work! Sounds like my thing. ;o)

Cheers,
Kim.

I do play guitar, though I'm more comfortable on keys, and would be approaching jazz from the keyboard end, at least as a first port of call.

That said, it's an interesting concept I see at the site. I have a guitarist mate who's also on a jazz kick so I'll certainly forward this to him.

However, one of the issues I have on guitar, being less familiar with guitar than keyboard, and partly just due to the nature of the format, is not just that I don't know where the notes are, but that, on keys, I can easily see the current chord, and how that fits in to the current key, the previous chord, etc. I can see it all because Ab looks the same everywhere. I know, for example, if the note I'm playing currently in my solo is the 5th of the current chord, for example, or whatever. On guitar, knowing the scale is one issue, but to be really good you have to also know how those notes fit in to the current chord, the last chord, the key the tune is based around, etc. This is a part where it seems easy to me on keys, but on guitar I get lost, and while these lights will help with which actual notes are in the scale, I can't see that they will tell me which note fits where in the present scheme of things, relative to the current chord and key, etc, if that makes sense. That's still going to require that I know all the inversions of every chord all up and down the neck. I don't see a way around that.

Good idea though. Very good idea, and a lot could be learned from it.

Cheers,

Kim.

I'm definately getting the idea that some hard work is going to be required
here. ;o)

DOH!

Cheers,
Kim.

[View Forum Message](#) <> [Reply to Message](#)

Hey Kim,
Jazz is a language all unto itself. You have to ask yourself:

- What style of Jazz do I want to learn and Play?
- Be Bop (50, 60s)
- swing (30's 40's)
- Big Band(40, 50s)
- Smooth Jazz :)
- Jazz Fusion.?

This question has to be aswered first. What style of Jazz do I want to speak.

2)Okay.Now, that you've answered question #1, you must emerse yourself in intense record (ear) training. Night and day. Only listening to the style you wan tot play. Find the band or intrumentalist that fit's the style, and listen listen, listen.

3) Find a local Jazz band that is playing the style you want to play. Go see them often. Again,listen, listen listen.
Observer and the instruemntalist moves, chords..

4)Practice with your record player/CD .try to stay with Wes Montgomery. The more you do this , the more that given style will become familiar.

5) Leasrn to start improvising with your voice. Just start scattng lines.
Then, play that line on your instrument..

6)Jazz is a language that one must take very seriously.Unlike rock, pop, you must become -Jazzed about jazz.

7) Lastly,learn all of your Modes & Scales and practice singing them..Above all, dedicate your life to the art-form..

Jazz Fusion for sure and Be Bop when I'm too old to play Jazz Fusion !
I'm gonna join Spyro Gyra, they just don't know it yet. :-)

Seriously, forget the books, get a dvd of your fav jazz band playing live, then try to play the instrument part they are playing and jam along. That's the next best thing to being in the band, except having

your own band! Go get em!

Oh, I forgot to tell you. After all of this practicing, perspiration and =
starvation since you won't be able to work since you're practicing so =
much; once you learn how to play jazz, try finding a gig that pays more =
than \$50.00, all 2 of them a month. While you're playing expect the =
usual loudmouthed moron, yelling over your solo, who could give a crap =
about all the hip shit you're playing. Then be prepared to turn down or =
play more traditional, if you're playing too loud or too hip. And don't =
forget that you'll need a day gig to pay for your coke and alcohol =
addictions, since you've become so neurotic, myopic and reclusive after =
about 10 years of constant 6-8 hr/day shedding. If you had a life before =

you became a jazz musician, you can expect that you won't have one = after.

Kim, I'm really being facetious but this isn't too far from the truth. = Don't get me wrong, I love jazz. I spent most of my youth and young = adulthood perfecting my craft, completely engrossed in and devoted to = learning how to improvise, solo over changes and write. I still pursue = my 1st love, jazz, with a passion, but I have a day gig so I can pay for = my musical habit. If you do it, do it for the love of it and because it = really means something to you. There's really something special about = jazz for me. Unfortunately the listening public has little or no = understanding, or appreciation of the music form.

Hal Galper says it better than me: "One of my long-time associates in = the business once said that the inscription on his tombstone would read = "It wasn't worth it." As positive a kind of guy as I naturally am, I'm = beginning to sympathize with him."

Read the whole thing here: http://www.richlamanna.com/hal_galper.htm

You know how to make a million dollars playing jazz?
Start with 2 million.

Rich

"Rich Lamanna" <richard.lamanna@verizon.net> wrote in message = news:444901e4@linux...

Kim, the only way I learned how to play jazz was by listening to the = cats that I really dug and transcribed tons of solos. I practiced as = many arpeggios as I could find or create with my own musical sense, in = every key of course, this is a must, learned all the chord scales, in = triads, sevenths, and 4th patterns, especially the dominant ones, = (they're more complex and were harder to hear for me), Altered, = Diminished, Harmonic Minor, Melodic Minor, etc., it's endless my friend. = It's all repetition in the beginning, but eventually you begin to find = your own voice and things start to fall into place. It only took me = about 25 years :0 and I'm still searching and analyzing other's solos. I = play the sax and recently the steel drum which has made me more aware of = comping. Keyboard is challenging in that you comp and solo = simultaneously. If you want to do this on piano, you're on the right = footing already if you're listening to cats like Bill Evans, Oscar = Peterson, Chick, Herbie, George Shearing, etc... Transcribe and shed = like hell.

Cheers and good luck,
Rich

this week's whim for me is that I want to switch all my musical pursuits
to jazz. I mean rock is all so yesterday. ;o) =
Actually, it's
not a sudden whim for this week. It's been brewing for some time,
but I've been avoiding this switch because it sounds like too much work.
Part of the problem is that jazz musos, or good ones at least, are
so good. I mean when you compare the keyboard parts in the average
top ten tune to the piano part in an average jazz tune, there's no
comparison. One is decidedly more difficult, more advanced and
more clever. And harder to play. And for the last 20 years, when I
wanted to learn a tune, I've listened to a recorded performance of
the tune, and then worked out some parts to imitate what I hear,
but with jazz the expectation is different. For starters most
recorded versions are incredibly personalised to the player. If I
copy what I hear on a record, I'll just sound like somebody
emulating that particular recording, where the expectation is that I
should be doing my own, different, original version. I mean I'm
quite capable of doing that, but I need to learn the tune somehow,
and while I have some ability to read charts, I'm hardly an expert at it,
as I've found that working off the actual recordings is generally far
more effective for pop/rock music. Not so for jazz it seems. Anybody
know of somewhere where I can download copies of jazz standards
as they're written"? A reference point as to how the original melody
goes before people start "doing jazz" to it? Bet there's no such thing...
...would be handy, for me at least. MIDI files even might be
ideal. And of course I don't actually

know any real jazz musos. I know some people
> who know a bit of =
jazz,=20
but nobody where I'd say there expertise is in jazz.

Or: 7) Just get a fretless bass, ignore if you're playing anything scalar or not, and insist that you're still just "hanging on the outside".

:)

You mean you don't know all your chord inversions?
That's standard requirement for R & B. You'd be hard pressed to play some
Earth Wind & Fire not knowing 90 percent of your chordal inversions :)

Now that we're on the subject, to play Jazz, one should have a foundation
as to where that style is derived from.
Today, I would say that having a firm understanding of the Blues is paramount!!
Simply put, you can play all the notes in the world, but, if it does not
have meaning or if it does not swing, then it's just a lot of notes..

From the Blues, then Jazz or even Gospel. The Gospel music form is a very
interesting form. It's comprised of: The Blues, classical, Jazz, R & B, Rock
& Roll.. Yep, you get it all in on art form called Gospel music. Being from
Detroit, which is Gospel music's mecca, I can tell you that there are some Local
Jazz great talents (James Carter-Sax) and others. These guys can be-bop you
all night long, but all are lost in a Gospel situation..
especially the Jazz keyboard guys. Lost in space when it comes to playing Gospel.:)

But, You take a un-learned, can't read Gospel Kid who plays at a Store-front
church, to the local jazz spot, and he or she can flow..
So, what am I saying.. ?? Having a good foundation on the origins of Jazz and
it's off-springs can shed a lot of light into the world of Jazz..

Lol!!
That'll work until the bandleader calls out "So What" by Miles Davis..Then
what will do..He has the "Signature" lead-Bass line :)

Thanks for that Rich. I'll check out your link too, when I get through some of these others.

At this gig the other night, one of the guys said on mic "Our CD's are available at the bar. If some of you guys bought a CD that would really help us hit the jazz top ten, which would I think require about 20 sales..." ;o)

I'm aware that jazz isn't going to make me rich and famous. Even in cases where people are famous, they're still not rich. The truth is though that me and popular music seem to be going our seperate ways. There is little in new music that interests me, and little motivation for me to persue it, and I really don't feel very driven to play stuff that I think is crud, just because that's what the punters want.

I'd much prefer that I get enjoyment out of it myself, know my craft, and have a small but knowledgeable audience that appreciates and understands what I'm doing, which is where jazz will likely take me. We do have a few jazz clubs around Melbourne, so if I can work towards gigs in such places it will hopefully mean that at least most of the audience will be appreciative, even if they don't really understand it.

I've got some work to do before I get there though. Although it's probably true that my "fudged" jazz I do at the moment is probably fairly adequate for the average unknowledgeable audience. There's part of me that can't stand the thought though that there's one guy sitting at a table somewhere in the room thinking "This guy really doesn't know jazz"... ...which is I guess what drives the jazz muso. ;o)

Cheers,
Kim.

"LaMont" <jjdpro@ameritech.net> wrote:
>You mean you don't know al your chord inversions?
>That's standard requirement for R & B.

Not on guitar I don't. Well, I do know most of them, but I'm not fluent in them. They're not second nature, which they need to be to make full use of them while soloing. I know enough to get by in a blue tune mostly, because blues progressions tend to move around far less than a lot of jazz. I mean it's pretty easy to visualise the inversions for a 12 bar or something similar on guitar, but step that up to a jazz piece, with 9ths, 11ths and 13ths, and suddenly it's a whole new ball game.

I don't consider myself a guitarist though. I can fudge guitar for the purposes of playing in a pop/rock outfit, where a lot of what goes down is power chords anyhow, and everything is pretty basic. Even in these cases, guitar is my second instrument. Typically when on stage I have a couple of keyboards, and a guitar on hand for those tunes which are purely guitar, and then have a "real guitarist" who actually plays the guitar parts for the most part.

I have no ambition to become a jazz guitarist though, in the near future at least. Jazz is going to be enough work on keys as it is. ;o)

Cheers,
Kim.

Then you put on your best Miles Davis impersonation & play it off by saying: "Look muthafucka, the muthafuckin' title of the muthafuckin' song is: 'so-muthafuckin'-what?', whihc muthafuckin' means I can play it any muthafuckin' way I muthafuckin' want to and you don't have SHIT to muthafuckin' say about it!"

lol

>where people are famous, they're still not rich.

I'll bet that Jason Miles might disagree with you to some extent there... I have no clue as to how rich or not rich he is, but if he's making a living with jazz & living in New York City as he's doing it, he's got be doing reasonably ok, right?

In any event - I believe you have to do that which you love, regardless... look at me, I do Progressive Rock, for God's Sake! If there's anything more niche & obscure than Jazz at this point in time, it's that! lol

Well with music, if you don't love it, you simply can't be dedicated enough to rise above the pack. Being really good comes from sheer hard work, and you're only going to do that work for the love of it, because record companies don't pay you to spend 5 years in the back room getting your chops up to scratch. ;o)

>look at me, I do Progressive Rock, for God's
>Sake! If there's anything more niche & obscure than Jazz at

Hehe, no it's not in the current "pop rock" scene really is it? Like you say, you've gotta do what you love though, or it's pointless. I mean music is art, and you can't create art unless you have a passion for it.

I'm just not sure if this jazz phase will last long enough (20 years? ;o) for me to become a really good jazz player, but even if I just go through a 12 month fad, I'm bound to come out the other side with a far better understanding of music, and that's gotta count for something. :o)

Cheers,
Kim.

On the other hand.... :-)

My neighbor is an upright bass player. He gigs the dc cocktail/benefit/art show/museum circuit. Also gives lessons during the day, his wife gives voice lessons (amazing voice), and his twin daughters get an almost free ride to one of the most prestigious private schools in DC because of their prodigious musical talent.

In other words they have a rich, rewarding musical, family and financial life based right on jazz and classical.

Anything is possible :)

Chuck

Oh, I forgot to tell you. After all of this practicing, perspiration and starvation since you won't be able to work since you're practicing so much; once you learn how to play jazz, try finding a gig that pays more than \$50.00, all 2 of them a month. While you're playing expect the usual loudmouthed moron, yelling over your solo, who could give a crap about all

the hip shit you're playing. Then be prepared to turn down or play more traditional, if you're playing too loud or too hip. And don't forget that you'll need a day gig to pay for your coke and alcohol addictions, since you've become so neurotic, myopic and reclusive after about 10 years of constant 6-8 hr/day shedding. If you had a life before you became a jazz musician, you can expect that you won't have one after.

Kim, I'm really being facetious but this isn't too far from the truth. Don't get me wrong, I love jazz. I spent most of my youth and young adulthood perfecting my craft, completely engrossed in and devoted to learning how to improvise, solo over changes and write. I still pursue my 1st love, jazz, with a passion, but I have a day gig so I can pay for my musical habit. If you do it, do it for the love of it and because it really means something to you. There's really something special about jazz for me. Unfortunately the listening public has little or no understanding, or appreciation of the music form.

Hal Galper says it better than me: "One of my long-time associates in the business once said that the inscription on his tombstone would read "It wasn't worth it." As positive a kind of guy as I naturally am, I'm beginning to sympathize with him."

Read the whole thing here: http://www.richlamanna.com/hal_galper.htm

You know how to make a million dollars playing jazz?
Start with 2 million.

Rich

"Rich Lamanna" <richard.lamanna@verizon.net> wrote in message news:444901e4@linux...

Kim, the only way I learned how to play jazz was by listening to the cats that I really dug and transcribed tons of solos. I practiced as many arpeggios as I could find or create with my own musical sense, in every key of course, this is a must, learned all the chord scales, in triads, sevenths, and 4th patterns, especially the dominant ones, (they're more complex and were harder to hear for me), Altered, Diminished, Harmonic Minor, Melodic Minor, etc., it's endless my friend. It's all repetition in the beginning, but eventually you begin to find your own voice and things start to fall into place. It only took me about 25 years :0 and I'm still searching and analyzing other's solos. I play the sax and recently the steel drum which has made me more aware of comping. Keyboard is challenging in that you comp and solo simultaneously. If you want to do this on piano, you're on the right footing already if you're listening to cats like Bill Evans, Oscar Peterson, Chick, Herbie, George Shearing, etc... Transcribe and shed like hell.

Cheers and good luck,

Rich

Kim, never apologize for your art, period. If you bait your hook with =

your heart, the fish will bite :-)

Rich

"Rich Lamanna" <richard.lamanna@verizon.net> wrote in message = news:44498482@linux...

Oh, I forgot to tell you. After all of this practicing, perspiration = and starvation since you won't be able to work since you're practicing = so much; once you learn how to play jazz, try finding a gig that pays = more than \$50.00, all 2 of them a month. While you're playing expect the = usual loudmouthed moron, yelling over your solo, who could give a crap = about all the hip shit you're playing. Then be prepared to turn down or = play more traditional, if you're playing too loud or too hip. And don't = forget that you'll need a day gig to pay for your coke and alcohol = addictions, since you've become so neurotic, myopic and reclusive after = about 10 years of constant 6-8 hr/day shedding. If you had a life before = you became a jazz musician, you can expect that you won't have one = after.

Kim, I'm really being facetious but this isn't too far from the truth. = Don't get me wrong, I love jazz. I spent most of my youth and young = adulthood perfecting my craft, completely engrossed in and devoted to = learning how to improvise, solo over changes and write. I still pursue = my 1st love, jazz, with a passion, but I have a day gig so I can pay for = my musical habit. If you do it, do it for the love of it and because it = really means something to you. There's really something special about = jazz for me. Unfortunately the listening public has little or no = understanding, or appreciation of the music form.

Hal Galper says it better than me: "One of my long-time associates in = the business once said that the inscription on his tombstone would read = "It wasn't worth it." As positive a kind of guy as I naturally am, I'm = beginning to sympathize with him."

Read the whole thing here: http://www.richlamanna.com/hal_galper.htm=20

You know how to make a million dollars playing jazz?
Start with 2 million.

Rich

"Rich Lamanna" <richard.lamanna@verizon.net> wrote in message = news:444901e4@linux...

Kim, the only way I learned how to play jazz was by listening to the = cats that I really dug and transcribed tons of solos. I practiced as = many arpeggios as I could find or create with my own musical sense, in = every key of course, this is a must, learned all the chord scales, in = triads, sevenths, and 4th patterns, especially the dominant ones, =

(they're more complex and were harder to hear for me), Altered, =
Diminished, Harmonic Minor, Melodic Minor, etc., it's endless my friend. =
It's all repetition in the beginning, but eventually you begin to find =
your own voice and things start to fall into place. It only took me =
about 25 years :0 and I'm still searching and analyzing other's solos. I =
play the sax and recently the steel drum which has made me more aware of =
comping. Keyboard is challenging in that you comp and solo =
simultaneously. If you want to do this on piano, you're on the right =
footing already if you're listening to cats like Bill Evans, Oscar =
Peterson, Chick, Herbie, George Shearing, etc... Transcribe and shed =
like hell.

Cheers and good luck,
Rich

part in an=20

average jazz tune, there's no comparison. One is
more difficult, more advanced, and more clever. And harder to play.
And for the last 20 years, when I've wanted to learn a tune, I've listened to a recorded performance of the tune, and then worked out some parts to imitate what I hear, but with jazz the expectation is different. For starters most recorded versions are incredibly personalised to the player. If I copy what I hear on a record, I'll just sound like somebody emulating that particular recording, where the expectation is that I should be doing my own, different, original version. I mean I'm quite capable of doing that, but I need to learn the tune somehow, and while I have some ability to read charts, I'm hardly an expert at it, as I've found that working off the actual recordings is generally far more effective for pop/rock music. Not so for jazz it seems. Anybody know of somewhere where I can download copies of jazz standards "as they're written"? A reference point as to how the original melody goes before people start "doing jazz" to it? Bet there's no such thing...
...would be handy, for me at least. MIDI files even might be ideal. And of course I don't actually know any real jazz musos. I know some people who know a bit of jazz, but nobody where I'd say there expertise is in jazz. I think I just need to bite the bullet and start putting some serious effort into improving my chart reading skills...
Cheers,
Kim.

Yeh, I've actually been reflecting upon this since the posts about not getting rich.

When I think about it, I've heard a number of people around Melbourne comment that you earn much better money doing jazz gigs than pop/rock gigs if you're an unknown or little known muso. The thing being that jazz has an aura of sophistication to it. Corporations want it for their presentations. Wineries want it to sell their wine. The the people with the money to burn want it, and their aren't that many people who are any good at it.

I've actually heard of some fairly average jazz players getting \$200+ a gig,

whereas anyone other than your top cover bands here wouldn't be making that from pop/rock. Good jazz players can make \$500 in a night, or so I've heard.

On the other hand, that's probably as good as it will get. You're not going to make a million selling records, ever. But I'd be more than happy with a few hundred a night, a free feed, and free beer, especially if there's a piano waiting for me so I don't have to lug. :o)

Cheers,
Kim.
