OK I got everything working with the new MoBo and thought I would finally
get to try some of Mikes plugs (will donate when I can use) followed instructions
on his page, went to start PARIS and got the message-App has failed to start
because Stock Fx dll was not found. Reinstall app. What did I do wrong. I
put the dll and ini files in system32\ensoniq\plugins. I tried to change
my path as per his instructions. One thing confused me though, When I got
to En. variables box the path says
(C:\WINDOWS\system32;C:\WINDOWS;...) I double clicked it as the instructions
said. A second box opened the top line "variable path" says path. the second
"variable value" says
 (%SystemRoot%\system32;%SystemRoot%;%SystemRoot%\System32\Wb en)The instructions
said to copy the path to variable path.I must have done something wrong because
now both of these boxes are the same but PARIS won't start. What did I do
wrong. In the system variable box nest to path though it shows as (
C:\WINDOWS\system32;C:\WINDOWS;...)if
I highlight copy and paste it it is the exactly the same as the variable
value on the next page second box. If you can understand this you deserve
a metal :^).. What should these boxes read. Thanks Jim

I'll pick up my medal after work today.. hehe

Your path should be "
%SystemRoot%\system32;%SystemRoot%;%SystemRoot%\System32\Wbe m; "
 plus whatever else you want appended to the end.

Like you might want this:
" %SystemRoot%\system32;%SystemRoot%;%SystemRoot%\System32\Wbe
m;%SystemRoot%\system32\ensoniq\plugins;

John

Here's your medal John. Thanks Jim

```
      _____
    /  Thanks  \
    \   John   /
    / You Rock \
    _____/
```
