I use my RME's ADI-PRO8 as a DA section.

So could these "only" 20 bits take away from my mixing hearing ?

I record 16 bit inside Paris but Paris uses 24bit inside...

Thanks

DimitriosHi DJ,

All my hopes and wishes are with you and Amy.

>I'm starting to look around for a couple of small diaphragm condensers. I don't have a big budget for these at the moment - trying to keep it between \$500 - \$1000 for the pair.

I thought about the Studio Projects C4, but haven't heard any feedback on them from someone who uses them in the real world. Then I saw a couple of Peluso mics - CEM6 - that looked promising. I read on this NG that someone had bought some Peluso capsules, and I was curious as to how they are working for you..

>Nope, you got me wrong there,

Ok, I am a guitar snob but not in so far as guitar guys must be virtuosos.

I love Hendrix, but also Townshend and Richards, Neil Young mid 70's guys like Tom Verlaine and even Paul Weller of The Jam or hows about some Johnny Marr or Billy Zoom or Bob Stinson of The Replacements Will Seargent of Echo and The Bunnymen or evenn The Edge ..I could go on, some of the guys are technical, some are not, but all of em are honest and heart felt, as well as inovative, and most of all have somehting to say to me. Navaro always seems like an after thought in Janes (he looks good I guess), Perry and that drummer were the best part. Hillel Slovack and John Fruchante (sp?) were much better in RHCP, my opinion of course

He just seems like a kid in a guitar center with a chorus and boss distortion and does not hold a candle to some of these.

Gimme greg Ginn or old J. mascis anyday. I'd rathe rlisten o Willie Nelson on theat old banged up nylon.

Sorry to go so far with this, but you have stumbled across one of my fave

driking night debates, really this exact topic.

P.S. I also really think that in todays world with out 35 years of myth building many people who walked in on Hendrix performing at a tuesday night open mic would turn around and walk out.

I guess it just depends on what you want as the final product. If you just want the tape sound, and don't care about actually mixing off of tape, then just fly the 2" tracks in to Paris and enjoy being able to edit/manipulate to your hearts content.

An easier method (if live tracking a band or whatever) would be to just take the monitor from the repro head into Paris while tracking. Sound goes to tape, then off the repro into Paris. Boom. Analog-ish sound.

Enjoy!

rsted to know how they sound on other sources as well when you get to trying it out more.

I've been wanting to add a ribbon to my kit for a while, but just haven't had the money to do so.

Thanks

-volthauseI tracked some drum overheads with them yesterday, sort of a jazz thing, and they were pretty nice--real smooth on the top.

I also did some EG overdubs, and easily liked them as much as my Royer 121's...

These were the 23 stock models--I should have a pair of the 46's Friday or Monday and will post about them later...

I think they are a good investment.

ement. Others here have reported some consistency
problems with them.

NeilHey Neil,
Which capsule did you use in the M147 and did you do it
yourself?

What kind of improvement did you see?
Got an M147 waiting to be ripped apart:)

Thanks,
Pete

tudents had been seasoned
pros and will upgrade the preamps and cableing before buying new SC mics.

As Don C. has recommended for strings and symphony, the newer
John Hardy 990 would be my choice.

I want to do the Peluso - Mojave tango with a few mics in the future,
but my plate is full and I can't afford to buy kits and leave them sit.

Do not expect the stereo DAC to output WC, it does not.

Only the ADC or the dedicated WC unit have WC outputs.

If you plan to buy, the Stereo AD with WC out is a great option if you go into a distro unit. A used Aardvark SyncDA is a good option at a great price off ebay. In fact, the Aardsync WC unit is also a good option and value if you need to save money and don't mind 44.1 - 48khz.

Amy is doing a little better and wanted to come home so they loaded us up with a bunch of test kits that we can do here coordinating with her local doctor starting Sunday and going for the next 6 days, then back to Scottsdale on the 21st for analysis of these tests, results of the tests she took while we were there and even more testing on the 22'nd and 24th. Life has become one big test it seems. I must say that the Mayo Clinic is like nothing I've ever seen in my entire life.

Now I'm off to start playing catchup. It's amazing how nuts things can get when you're running your own business and you have to leave it, even for just a couple of days.

Thanks again everyone for the prayers,

Deej

>So is it possible to get a native fx loop on the global master yet? maybe
with wormhole etc..

I am on XP..Paris3.0.

1 MEC , 1 Adat, 1 8in , 1 8out
My machine has a SPDIF in/out built in the mobo.
I have wavelab4 , cooleditpro.

I was wanting to attempt this on the same machine , but will get another
machine if neccessary.

I want to be able to monitor thru PARIS MEC 8outs (24bit).

I have not been able to get the paris ASIO drivers to work on this machine.

Please tell me YES..

BrandonASIO for Paris has not ever been ready for primetime use IMO, and many
people - though not all - have not even been able to get it to work at all.

I wouldn't put any eggs in that basket my friend.

As for native FX on the global, I don't believe the architecture of paris
will allow for this from within the program. That being said, you could
patch an external insert and route it into another host (there will be
endless variations here) DirectX/VST application through another sound card.

>Don,

I'm using 2792 mic cable for patch cables and various single balanced cable runs, and lots of different lengths of MG 2931 and MG 2932 (4 and 8 pair snakes) for my runs to my patchbays from my AD/DA converters and my various analog gear. I recently added a few pieces of gear that are patched in with short runs of some older Horizon cabling with for the time being until I can get around to building some more Mogami cable runs. Not noticing a sonic hit with this, but I've got a 100' roll of Mogami 2792 here that's going to get chopped up pretty soon.

>Can a hard loop be made from the lightpipe ADAT out to the ADAT in without
using the sync?

Will anything be lost or jittery?Global Master Outs to the ADAT lightpipe outs
Hard Loop from ADAT lightpipe Out to ADAT lightpipe In
ADAT lightpipe In to Tacks 15 & 16 (L&R respectively)
Mute Tracks 15 &16 and Insert instance of Wormhole on each track
Open WaveLab and Or CoolEdit Pro and Insert Wormhole on two new tracks
(L&R)
Use VST/DX plugs from within and bounce inside the second app. Should not
lose any PARIS sound since Digital transfer correct?
Then go SPDIF out to converter to XLR for my monitors

This is all on one machine.

Possible?????

I don't know if wormhole works like this or if I can hard loop on ADAT like
that without clocking.The SPDIF out is from my mobo sound card by the way...

no external device....just trying to route sound within PARIS.

>> It really sounds to me like Blue and JZ weren't clear on what constituted
"design" from the outset. JZ probably felt that he had a right to design
based on some manufacturing decisions (or maybe he did design them), and
Blue felt they had a right because they paid for it, or designed some
component of the mic. I don't recall hearing stories about either Skipper
or Martins being the "original" designer, or concept creator. None of
Blue's posts indicates that either, but rather claim Blue as a company as

the owner. JZ isn't presenting his argument very professionally, but a language barrier may be making it difficult. Really hard to say. He may have "adopted" the designs from years of manufacturing them - pretty simple trap to fall into. Or Blue may have assumed ownership because of a flimsy agreement with JZ. Perhaps only time will tell.

The only test I can imagine would be for anyone with an older (pre 2004) Blue mic to put it up against a new version of the same mic (2005 and out). If they match, Blue may be right, if not, Blue is likely trying to make wine out of water. This is by no means a fool proof test, but probably the closest we as users will ever get to surmising what really happened.

Regards,
Dedric
