MBATX-G7V600-B from DFI
This has 7 pci slots !!!!
On board 128 mb video, on board 1GB lan and 8 usb 2.0 !
I will definetely try one an try to full all 7 pci slots with seven eds cards...
Cheers,
Dimitrios

That's 915G/Pentium IV socket 775 mobo... can you even find those for sale
still?

Hi Aaron,
And being a 915G it had allot of performance issues.
You can still find refurds on them.
A Magma is the only thing that will work for that many cards reliably.

my experience with DFI has been less than adequate to say the least, but
that's been at least 5 years. Haven't touched one since. QC issues. I'm
guessing that hasn't changed in your experience either Chris?
D man... I'd probably steer away from this mobo.

Thanks for your comments here...
Any other 7 pci slot motherboard that has on board Gigabit ethernet and usb
2 ??
Cheers,
Dimitrios

HI Dimitrios,
If there are any still being produced I have a pretty good feeling that
they will not work well.
YOU really need to just get a new or used magma or SBS chassis. They
really are the only things that work well.
