paganda, the myth,
the way we rock ourselves to sleep at night. The truth is significantly different,
however, and is at the root of just about everything that has gone wrong
with this great democratic experiment.

   We are not all created equal, in fact. This inequality is not based on
race, or sex, or religion, but upon the slow development of a body of laws
that have created and empowered a breed of super-citizens which rule over
every aspect of our lives, almost completely beyond the reach of justice.
These super-citizens exist today under the familiar name "corporation."

   But wait, a corporation is basically a

he
fact that regular citizens' tax dollars are used by the government to purchase
goods and services from corporations involved in the production of weapons,
petroleum, timber and agricultural products. Corporate perks like jets, elaborate
headquarters, public relations firms, and executive retreats are all tax
write-offs; the regular citizen, by contrast, pays for their perks with after-tax
dollars. When a corporation screws up and destroys an ecosystem with a toxic
spill, corporate liability shields protect them from financial and legal
punishment, and the cost of the clean-up is borne by the tax dolla

Yeah, and we wouldn't want to do that would we?

And thanks SO much for the lessons on getting along, coach!

heh

DCYes, this weekend I finally made it down to the store. After losing a day
to a hangover on Saturday, on Saunday I made the concerted effort to make
it down to the store. I still have a hdd upgrade planned, but stage 1 of

the upgrade was the Gigabyte K8NS Ultra 939 MB, an Athlon 64 3000+ and a gig of ram.

Of course, in my haste to get running I had no interest in reinstalling Windows, but quickly found that Windows XP isn't all that forgiving if you suddenly replace a whole bucketload of it's hardware. Suffice to say a quick "repair" of XP brought the system back up, and it's all good.

Mind you I haven't actually run Paris on the thing yet. I'll get to that tonight. Point is though that the EDS cards fitted in just fine. From what I can tell I could actually put a full 5 EDS cards in this thing if I wanted. The BIOS is really nice with IRQs, and allows you to assign each PCI slot to whatever IRQ you want, and tells you what you'll be sharing with on each setting. PCI 1 & 5 share IRQs qith each other, but no other slots share far as I know, so it should be possible to simply put every EDS card on a single IRQ which isn't shared with anything else.

The only complaint I have about this board is that it doesn't seem to have an SPDIF In provided. Even though it is supposed to be on the board, the supplied connector which connects to the mobo header only has outputs. The good news is though that it has both coaxial and optical outputs. The only other complaint is that, as I imagine is often the case, the board has too much I/O for them to fit it all on the mobo, so there are of course two of those metal strips that lose you a PCI slot, and these allow you access to the "rest" of your audio plugs (including SPDIF) and in the other case the Firewire and some bonus USB2 connectors. At this stage I've only got 2 EDS cards anyhow so this isn't a problem, but if I wanted to use 5 PCI slots, SPDIF and Firewire all at once I'd have to find a workaround. This isn't an issue for me though.

I bought a cheapy "winfast" Geforce 5200FX graphics card also for good measure. This thing was nice and cheap, and I figure being a Geforce card it should play nice with the NForce mobo chipset.

Tonight I'll get my other boot working, and see if we can't get Paris to run.

I'm looking forward to getting my planned 2 x 250Gig Sata drives for the thing. That should speed it up a whole chunk more I expect. Currently the OS on this new box is living on an old 27 Gig 5200RPM Maxtor drive I bought "Back in the day" while I was over in the U.S. in 98 or whenever it was. I imagine it's a little slower than current technology. ;o)

Cheers,
Kim.My Cubase DAW is running at 333MHz (2 x gigs of PC 2700 DDR) using an AMD XP 3000 CPU. It is plugging along at between 60-75% CPU usage when playing back 48 tracks of audio with little else going on other than plugins from my 3 x UAD-1 cards. I'm not fmiliar enough with SX to knowif this is about normal

or not and I'm sure I could optomize the system a little more by turning off
the LAN in the bios when I'm mixing since one of my RME's is sharing an IRQ
with it, but anyway, the system seems very stable and definitely usable as a
mixdown platform. I would however, like to squeeze a little more CPU
headroom out of it and I'm wondering if anyone here has ever substituted an
XP 3200 CPU for an XP 3000 and noticed that the gain in cycles was
substantial enough to justify the expenditure (as subjective as that is).
Anyway, it's a longshot, but I thought I'd ask.

Thanks,

DeejThat sounds like a very friendly mobo. what bios tdoes it use?

lameHere is a perfect example of what's wrong with the Rhetorical Right.
The author of this either insane or, more probably, vastly ignorant, and
unaware of it.. The worst part of all this is that this type of nonsense
is passing for informed opinion in the circles of those too lazy to do
their own homework. And to the detriment of the future of our world
these illinformed, intellectual sloths slurp this stuff up like a dog
sloshing up a bowl of beer..

Hanson, like so many rightwingers I've met, is off-the-scope crazy. The
right, it seems, is populated be people who cannot see the biggest of
pictures, preffering to only see what agrees with their own bizarre, USA
#1, world view. Take a look at what he says below and see the problems
with it.

Well, first of all, many have been pointing out that the US should not
have been invading Iraq, Afghanistan and many other nations since
Vietman, but more germain to the point, they've been pointing out the
culpability of the US since both the Afghani war in the '80's and the
Iraqi war since '89. This is not the new phenomenon that the right would
have us believe.

I do a stand up routine and my favourite part is hecklers - taking it
back is the spice of the fray.

it's 40 above and I don't give a fuck, got air-con in my truck and I'm
of the the beer store.....
