
Subject: Anyone know what would cause .mid files to shift pitch?

A mate's band uses some for backing. They do a dodgy and just play them in Windows Media Player (through the sound card's GM set one assumes) on a Windows XP machine.

Tonight they're all playing a tone flat.

Any clues?

Cheers,

Kim.

It sounds like a sample rate issue with the media player, though how on earth this could apply to midi files, I don't have a clue.

hehehe!!!!!!.....and stuff is going to start to taste different as well.

;oP

Now that you have learned perfect pitch, you are hearing it properly for the first time! ;-) it must have always been flat...

David.

It sounds like there's some control data going out omni - maybe pitch wheel?
Or the pitched devices are getting confused over some incoming control changes, zeroing various parameters, bottlenecking and responding to note-on note-off in a non-reset state or a jammed control change state. As a friend of mine once said when he first heard of it, "Anything is possible with MIDI."

Thanks everyone, but...

Turned out to be that there was a transpose function for the GM synth on the sound card's driver. Somehow it had been set to -2...

Who'd a thunk it?

Cheers,
Kim.
