Hi Everyone,

I may be late to the party with this, but I've just discovered JBridge. It wraps plugins so that they run in a separate process, allowing 64 bit VST plugins to run in 32 bit hosts. It also allows running 32 bit plugins in 32 bit hosts, but runs them in the other process.

I've been able to run the 64 bit versions of the Lexicon PCM bundle in PARIS with this, and it also allows the old UAD-1 plugins to run in PARIS with no additional wrapper needed.

Anybody else used this?

<https://jstuff.wordpress.com/jbridge/>

All the best,

Mike

64 bit plugin use looks good. I'll try this out.

Thanks Mike

Happy Canada Day!

I'm going to try it too.

I'm in the process of setting up a four EDS external box, using the the EXSYS EX-1035 4 PCI slot expansion backplane, and EX-1095 PCI-e host card. (Future-proofing, as I want to upgrade my studio PC, and PCI slots are all but gone). I have four EDS cards. Hoping the EXSYS will work with all four.

15 Euros is not a lot of money for the JBridge, which could become invaluable with my new build.

Thanks for the heads up, Mike!

Cheers,

Kim
