View Forum Message <> Reply to Message

I am trying to trouble shoot a problem that just crept up....
I am getting pops and crackels on my mixed down stereo files.
These do not appear during the mixdown...rendering process....just when I
try to play them back in Wavelab to master. I ran the error check in wavelab
and it tells me it is finding gliches...not overs as I usually have the Global
fader below 0.3 on mixdown also.
Somehow this is happening as it is saving the mix....is it a hard drive problem????
No problems tracking though.
any other suggestions...please help!!!!

Power supply? Pops & clicks can often be traced to that.

Very strange. I had bad ram give me some pop issues in the editing field of
Paris once. Swapped the ram and pops were gone. Do they visually show up in
the wave display of wavelab?
Good luck.

Good point, Aaron... when I was on Paris I never let my audio

---

drive get full, but it DID appreciate a good defragging from
time to time. (Come to think of it, we ALL need a good
defragging now & then LOL!)

Full drive is another one I've seen. Some systems want to be defragged as
well (though some don't).

for some reason it apparently is the UAD cards (2 cards 3.9 on win98)... if
I render those tracks it bounces to disk okay.....very weird though...never
noticed it before but....
I am running 64 tracks and using them a bit more on more tracks (pair of
fairchilds on drums, 1176 on 2 bass tracks and a couple of guitars, and 1176
and la-2a on vox) but the uad meter still didn't go over 60%. Anyway....problem
solved for now.....
Thanks again for the quick response.

Ahhhh.. the ole' PCI bus bandwidth trick. What kind of box are you mixing
on?

asus a7v deluxe mb, amd 3700 san diego core, 1gig ram, 4 eds in 7 slot magma,

2 uad-1's in mb pci slots.....would that problem let playback occur fine
and then just have the clicks on the bounced file.

Possible, depending on how your bandwidth is being hit. You will want to
reseach (Google) the Via chipset patches and see if they apply to you
specifically. There are also tools out there (I think DJ is more hip to it
that I am as I quit the Via habit some time back) that will allow you to
throttle adjust some things about the PCI bus usage on a device level.
