I just wanted to let everyone know that I've now got Paris running on my dual core Intel Mac Pro running bootcamp Win XP with a VirtuaVia Pcie to Pci expansion kit that I put in a rackmount ATX case.

This is a 2 card system so far, soon to be 4. I've got 2 adat cards in the mec, haven't tested those yet, but I've got Mike Audet's last library compile installed from Sept 18th.

Anyway, there you go. Paris running on a new Mac.. yippie kai-ay mofos! We don't need no newfangled daw! (Ok, I'll be running this as the summing mixer of a PTHD/Logic TDM rig, but it's still pretty cool).

Thanks again Kerry for your help refreshing my brain on the setup stuff.

Cheers,

TC

TC, you're welcome, and this really is a fantastic thing. This is the intersection of a number of significant developments unforeseen at the time of PARIS' discontinuation, and some of the things underlying the choices here represent completely new options.

1) The Intel Mac runs PARIS happily under XP. Mac users have expanded upgrade options now. They may not be options with OS9 - but they're options that let you run PARIS on a Mac (rebooting to work on tracks in OSX), and that's something. This may not be totally "news", but I'm glad to see it confirmed.

2) So far the pretty-much-brand-new VirtuaVia box seems to be a confirmed "go" - it's working so far with a two-card rig. This is, to say the least, extremely exciting considering its price point and the dwindling number of mobos with large amounts of PCI slots.

3) Mike's ADAT.dll and PCSL work will be the reason TC will be able

pull this off on XP (can you actually install earlier versions of Windows on an Intel Mac? I don't know). Without Mike having defeated the various issues surrounding PARIS on XP, Torry wouldn't be, for example, heading for six ADAT cards in three MECs.

There are two take-aways from this: the first is self-evident - there have been exciting developments to date.

The second is more subtle - a feeling of a bit more *confidence* that allows one to take a couple more risks, knowing Mike's on the case.

It may be premature for a "victory lap". But if this all works when the additional components arrive - freakin' awesome. Congrats.

Thanks Kerry, I'm just fortunate that you guys have been moving forward with all this in the last year. I didn't even think about the dual core aspect initially, but I'm glad Mike has been doing so much work on that and the multi adat card functionality to get all that running..

It's pretty exciting being able to move forward with Paris, I'll let everyone know how it goes once the full rig is built, which will probably be 4 cards, 4 mecs and 6 adat cards with additional 8i/o for 2 buss external hardware. I'll be lightpiping 48 tracks of adat from 2 digi 192 i/o cards, either recording over to paris from Logic (or PT8) or mixing in Paris in "live" mode, I'm not sure yet.. I still have to figure out the best workflow for that.

Cheers,

TC

Hi Ted,

There's no advantage, except the fact that I was already running two Mac Pro's, one for Logic/Pro Tools, and the other for additional virtual instruments.

If I didn't have the 2nd one to spare, I would have just got a PC box.

So in my case it was cheaper to use what I had.

Cheers,

TC

The only other thing to keep in mind is the shipping cost from France (I don't think it's available in the US), as well as the need for an ATX case and power supply.

I put mine in a nice rackmount atx case, and put in this additional big

fan with a 3 way speed control switch. The atx case has 2 doors that open out from the front. The little fan control switch is inside the door, so I can turn the speed up or down. I also got a 600w power supply to put in the case.

Cheers,

TC

Sounds like we need someone onsite to bring these in.

Considering the new PSUs and the myriad issues that have been
addressed... Chris? This interest you to take another look?

wow-

this is fairly significant, however, as one considering going to XP myself, wouldn't it just be easier/cheaper to build a dedicated windows XP box for Paris?

what are the advantages of doing it this Intel Mac way, other than fulfilling ones desire to work with Macs? in fact a dedicated win XP box would save rebooting for any treatment of audio in Logic etc...

curious

Hi lamont,

I jumped the gun a bit in my initial excitement..

Kerry is helping me with some of the files from Mike Audet.. there were a couple of major steps I neglected during setup (like the dual core configuration and some other things), and as a result my mec i/o cards are not showing up properly.

I'm going to try and get back at it later today and I'll keep everyone posted as to how I make out. I'm pretty confident we will get this running.

Cheers,

TC

I'm really thinking of getting a new Mac Pro for running..Logic Pro via Mac OS, Nuendo..Via boot camp, Pro Tools, and of course Paris..

This has been my dream setup for work.. I think it's finally coming true..

Why don't you build a Hackintosh ? I'm going to try my hand at it.
http://wiki.osx86project.org/wiki/index.php/Main_Page

Check the hardware components for compatible hardware. I picked up a ASUS P5K Deluxe/Wifi that I'm going to try. I hope to dual boot this

system with XP and OSX. Wish me luck.

respect

It's very easy...I've built 2 boxes now, one a quad core with 4gb ram and the other a dual core with 2gb ram.

The quad core, (studio), is even running a legit copy of OSX 10.5.4 ..I haven't done the upgrade yet, not till I finish my current project, but I'm assured that the auto updates from apple don't break the install.

It was setup using a boot disk (Boot-Kable-Bumby.iso) and then swapping to the retail OSX disk for the install and back to the boot disk to finish the install.

Martin,
A quad core is in the plan for me. Can I e-mail you if I run into trouble?
Were can I get the Boot-kable-bumby.iso disk?

respect
Nappy

Well I guess I won't have any thing to worry about because I don't have a

hackintosh. FYI, Apple doesn't prosecute end users, Microsoft does!!!!

It's specific, (broadly), to your motherboard, but if you go to the Hackintosh site

<http://www.hackint0sh.org/forum/forumdisplay.php?f=145>

It gives links to all you need....also

www.insanelymac.com

Email me if you run into major probs.. I'm a noob at it, but I got it working easily.

Different situation.
They are marketing a computer that runs Mac OSX, the hackintosh crowd are just allowing OSX to run on Intel machines, and suggesting the purchase of a retail disk.
From what I can gather, there is even cross consultation going on.

thanks Martin,
I've got a mobo from the approved list,so it should be pretty smooth sailing(i hope) I've already purchased the mobo cpu and ram so I'm committed. This will be my first build. Wish me luck!
So far this is what I've got:

ASUS P5K Deluxe/Wifi
Q6600 2.4Ghz 8mb cache 64 bit 1006 FSB
8GB DDR-2 667
xfx Geforce 8600GT video card

I got all this for \$432

respect
Nappy

Makes it a great value Mac, doesn't it?

The only gotcha may be the 8gb ram...don't know if its been tried..at least I'm not aware of it...

Also , I assume your dvd and HD are sata...and don't forget to make sre HCPI is set in the bios, but just read the duide and you should be ok.

Best of luck.

Martin H

That's pretty damn cool.

I've got to get a system together for my drummer so he use Logic LE and Pro Tools. Maybe this is the way to go since his budget is limited..

Cheers,

TC

Thanks Martin,
I bought the cpu and ram as a bundle. I couldn't pass on the deal I got.
I'll be sure to get sata DVD and HDD. Thanks again.

respect
Nappy
