e is some voodoo

that these folks think they are hearing when MP3's are upsampled to 192kHz.

I've never done this so maybe there is some validity to it, but anyway, they

like having it done this way. As far as the final audio product that is

heard in the film is concerned, 5.1 and higher sample rates aren't taking

the world by storm.....not even a little.

Deej

you need to record nothing,

copy

> >this to an adjacent track, invert the phase and then do a bounce.

> >

> >;oP

> >

> Now, that be some well-crafted nothing!

>

> yeah-- ChasOk,

Due to the many posts that maybe misleading if you don't follow all of them

in the right order I decided to summarize what I know regarding senderella

and its use with Paris .

1. Use inside Paris.cfg at the top the string EDSTransfer=8,16 .You could use 8,8 but this has problems with audio streaming. The 8,16 seems like the magical number, remember I tried them all....

This is needed because then Senderella works realtime NO LATENCY as a buss inside Paris.

Senderella seems like the greatest discovery among FREE plugins for Paris, link: <http://www.kvraudio.com/get/1433.html>

Senderella newest version has a redirect option so you can send the signal and not hear (or hear) the dry signal if you want.

It has 64 busses ! and now saves its condition and preset (the version before could not) after saving your song.

2. Senderella works across submixes ! but the latency in between submixes has to be taken into consideration.

3. So possible uses are

a) Use your favorite DX/VST/UAD1/POWERCORE /EXTERNAL DEVICE reverb as a buss with senderella.

You occupy two Paris audio tracks for your reverb return using 16bit (24bit works too) silence paf file.

Here you can create a long 5 minute file or bigger and have it in handy anytime you want it.

b) Use your favourite compressor VST/DX/UAD!/POWERCORE/EXTERNAL for buss compression.

4. On both uses the method is around the same.

5. Senderella although showing up as it is in Paris as vst does not let the audio pass the plugin, It stops in senderella so only WET signal can be send.

this is useful only for bussing say dsrumtracks to a compressor and not need to have also the dry tracks playing.

In that situation no wrapper needs for senderella.

But for full use and potential senderella needs to be wrapped

6. Wrappers that can be used are the FREE Spinaudio lite

[View Forum Message](#) <> [Reply to Message](#)

http://www.spinaudio.com/downloads.php?download_type=3&download_id=33 which can wrap ONLY one VST plugin.

So here you can wrap one instance of senderella and use it as send for reverb.

If you buy Spinaudio ofcourse you can have as many plugins wrapped as you want.

7.. Senderella by renaming its dll like send1,send2,send3 etc can be used as many times as you want it is that simple.

8. you need to have 16bit files (empty) on the receiving senderella instances.

9. If you have multiple cards then use (if you want it across submixes) tracks 15 and 16 of your last card, so that all sending instances are before these two.

10. On Me works but I haven't got very stable results which may be my computer though so you could give some more tests but on XP

works just fine here.

11. So to come to its actual use

First you wrap as we said senderella, I prefer chainer because chainer is extremely stable and has some good functionality like dry and wet volumes many slots midi automation preset handling etc.

Note that here we need a VST chainer/wrapper because senderella is only VST. For UAD1 you can use the same wrapper chainer and wrap the vst versions of VST.

HINT: If you buy chainer get the free Spinaudiolite and use its one instance to wrap only chainer.

So UAD1 plugins inside chainer will retain knob functionality and lower the latency down to 4096 samples for a normal UAD1 plugin.

12. If you wanna use all things without buying anything you can do this:

Get Spinaudiolite FREE and wrap senderella.

Get FFX4 DX chainer free

http://vincent.burel.free.fr/download/ffx4_FullDemo3.zip

NOTE: FFX-4 wraps/chains ONLY DX plugins whereas Chainer wraps/chains only VST

HINT: From inside Chainer you can use FFX-4 so have chainer to wrap DX and VST....

13. FFX-4 also has a low 4096 samples latency for UAD plugz. If you think that is big note that FXpansion wrapper that you guys were using gives 16384 samples of latency !!

14. So you wrap senderella with Spinaudiolite.

15. You put senderella on the audio tracks you wanna send to a reverb, put the send volume accordingly and redirect (full to the right) because Spinaudio mixes two times the sound of the track)

16. On audio tracks 15 and 16 you put two 16bit empty long files (5 minutes or more,whatever)

17. On track 15 you open as STEREO the senderella again (spinaudiolite wrapped) and put senderella as receiver .

Then on next native slot you open FFX-4 on track 15 as STEREO again.

18. You open from inside FFX-4 a UAD1 reverb or any other DX reverb (like DSPFX)

If you put UAD1 rvere

ortunately, I was out of town and missed the AES/Paris meet and greet, but I did have a couple of hours yesterday to go to the show and mill about for a bit. I was impressed with the number of high-end desks with small footprints by the "big guns". I even ran across the "Star Trek" desk that Gene posted a picture of a while back (can't recall the manufacturer).

I had an opportunity to check out a number of mic's (though extremely difficult to discern much with all the ambient noise). Despite this circumstance, I heard a couple that were interesting. There was a Braumer mic that was suggested by a respected colleague...can't recall the model, but was pretty nice in the \$1,200 dollar range. I also met Tony ?? from Telefunken...they have a couple of "economy" mic's that were pretty nice. Although Mojave was not represented, I was able to check out the SE Gemini and indeed it sounded nice.... particularly so at the price point that Morgan has offered. I think

about the support issue).

The highlight for me was meeting Rupert Neve...affable guy. I purchased his new pre "Portico"...seems pretty impressive (thanks for the heads up Gene) and he said he would grace the box with his signature.

It would have been nice too hook up with my fellow Parisites, but hey, there's always next time.

TyroneSimmons SDS7. This was the mid eighties. The SDS5 (original) had sounded cool and the new SDS7 was incorporating "digital samples" with analog. It sounded like total crap.

I saw JR Robinson playing them at a NAMM show (with Alan Pasqua, Dan Huff, and Neil Stubenhaus...whew!!!) and his sounded good. I talked to him after

ency.

>If you put a DX reverb you probably will get 0 latency !!, so no

>compensation needed at all.

>It ius like having AUX with DX effect for Paris !

>

>19. Now if you insist of using a UAD1 plugin reverb, the to compensate you

>do the following:

>

>You nudge ALL YOUR TRACKS (except for the reverb return on tracks 15 and

>16-well even if you put it there too nothing will happen anyway-)100ms

to

>the left and put voxengo sample delay (Try this instead of AnalogX DX

>plugin because you have the 64 plugin limit and with VST plugins NO LIMIT

>Then put inside latency plugin 384 samples to the right.

>Thus all processed tracks will be aligned to reverb return on tracks.

>

>That is for now.

>Please ask questions so I can see where I did my wrong homework...

>Regards,

>Dimitrios

>

>

>

>

>Some conversation or something I read lately, brings to mind a statement that a lot of radio stations have gone to mp3s as a medium of storing their playlists, hence the reason radio would sound like poop. And a friend of mine just subscribed to Sirius radio 3 or 4 months back and was instantly disappointed with the low quality "streaming sound" of the audio. I asked him about it last week to see if he was able to do anything about better reception or playback, and he said, "No, I've just kind of gotten used to it." Hopefully the audio/data compression technology will continue to improve, but once again, folks seem to choose convenience over high quality.

..02, CL

Here's mine.

Yamaha UD Stomp. 8 delays, all programmable, in one box.

This thing does sounds you cannot believe. Allan Holdsworth programmed a bunch of the sounds and they are terrific.

Without a doubt, the best delay ever made. Everything from the exact doubling you were looking for, to the coolest flange to the widest chorus to the most amazing volume swells anywhere. True stereo, with simple pan controls for each delay line. You can setup most any delay effect you can imagine and still have a couple of delay lines left over.

They were originally around 700.00 USD. Being a pedal, it was a hard sell, and they almost immediately went out of production.

I got mine for 198.00 from Musician's Fiend (errr, friend) and wish I had bought 3. I would not sell it for 2K.

You can still catch Allan bidding for more of these on eBay. He uses 2 live. They are already climbing back to the 300 range and I expect they will go higher.

DC

1x12, Blonde 2x12, Fane 4x12, Greenback 4x12, Boutique 4x12, Bassman
4x10, '65 Tweed 1x12, Fender Pro 1x15, Ampeg Portaflex, Ashdown 4x10 w/tweeter,
Sunn 200S 2x15, Acoustic 360, Hartke 1x15, SWR Basic Black, Ampeg 8x10, Ashdown
AMB410, SWR Goliath III, Hartke 4x10.

Any suggestions on what combo may sound good with a given sound would be
fantastic. Mostly I'm looking to get some nice hammond B3 and wurlitzer sounds
happening, so any suggestions specific to those directions would be fantasmalistic!
:o) Keep in mind the rotary speaker effect can be inserted on any of the
amp/cabinet combinations without effecting the sound in any way (other than
to add the rotary effect) so feel free to choose amps based on what would
probably sound good IF it had a Leslie. :o)

Oh, and the machine can also warp between two amps or cabinets, so if you think "a criss cross of 1/3 this amp and 2/3's this amp" would work, then we can do that too. :o)

Cheers,
Kim. My best gear purchase:

Baldwin 7' grand piano...
