Hi gang,

Well after nearly a month from ordering and 3 weeks in shipping I received the package from SWD with two PCI host cards, one PCIe host card and the EX-1035 4 card expansion kit.

Package had severe damage but the contents seemed in relatively OK shape except the PCIe card box had opened and parts shifted around a bit. Attached are some pics taken as received in case I need to file a damage report.

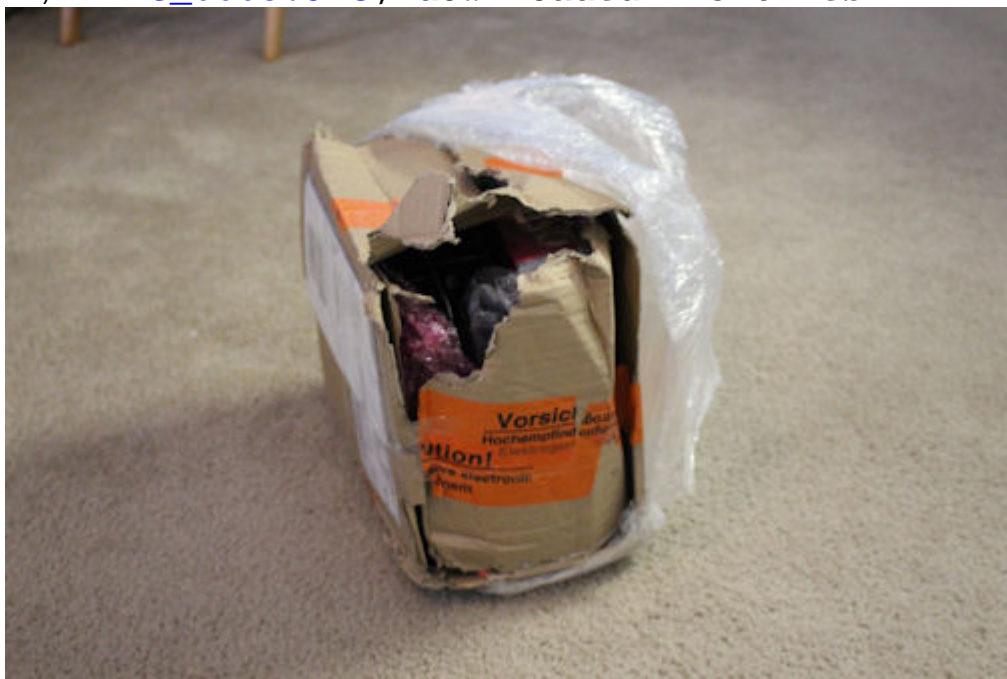

I'm giggin thru Sun so won't be able to build and test until next week, I hope. I've got 2 XP Paris rigs and a soon to be Win7 rig. I will begin testing with the XP rig with 1 EDS, then 2 then 3 and 4.

I'll update the forum with details shortly thereafter.

Wayne

Nice work they did! Maybe you can make them a song for it, like "United Breaks Guitars"
