-----How about two high quality well
designed LCD-s?
Samsung 193P+ maybe. ;-)

Btw, nice work.

Suad

----Actually, there is enough room for the THREE 19' LCD's already
planned, but thanks for thinking of me... ;-)

David.

This has happened to all of us. Recording and mastering classical is great training to stop doing it however. With the conductor sitting right next to you, (and they were on the stage 6 feet below the mics, so they *know* what the thing sounded like) they also know something isn't quite right. Could be a standing wave node right at the mic stand, or an overly aggressive brass section, but there is something that grates in the recording. Not a lot, just enough to keep the thing from being truly satisfying.

As an engineer, I have to find that problem. Once it was .2 octave - .6 db at 1247hz. Another time it was .4 octave - .4db at 4583hz, but when you find it, they go YES! There it is. Now the whole thing works like it should. (BTW, they were sitting there with their eyes closed... When I nailed it, they knew it immediately)

Conductors are the black belts of hearing music. We need to be about as good. When we are, we can reduce this incidence of PAHE to about 20%. We still need to watch for it, but we use our ear/brain

Wow. Tell me more about this. What do you see as lacking for
composing? MIDI implementation? Notation?

Songwriting is my main use for Paris. I do not use notation programs or
sight read well, yet songwriting is IT for me. Nothing
else matters as much. I put raw ideas down and write lyrics and
develop vocal parts, then start tracking.

> Does that make sense?

Absolutely - I generally don't fall for psycho acoustics, and closing my eyes and listening proved it. It's either there or it isn't. I was just giving the "Samplitude sounds better" crowd the benefit of the doubt. I also usually don't lend credence to such claims until I hear it for myself, but it can't be "I think it sounds better" - for me it needs to be - "the highs sound smoother for certain, and the lows are more detailed, with audible A/B examples". That siad, there is value in perception, and if one DAW gives the user a better feeling about the audio, workflow or enjoyment factor, then it's worth considering as a preferred choice.

> Wow. Tell me more about this. What do you see as lacking for
> composing? MIDI implementation? Notation?

I haven't worked much with Samplitude 8, and midi is improved there, but things that haven't improved are how Samplitude assigns VSTi's and midi channels. It feels like it is almost there, but is convoluted unnecessarily. For one - midi track monitoring is limited (compared to Nuendo, SX, Logic, etc) - esp. punch in record (though an improvement there is on the 8.21 update list, so it may work now). I haven't used it in months so I'll have to get back to you on specifics there, but I do recall having to assign a new track to overdub a midi track, and reassign the old one since Samplitude couldn't play two tracks to the same midi channel at the same time (layering was also a no go, but this all may be fixed in v8).

It sounds like you don't need notation - Samplitude doesn't have any.

The piano roll/key editor does seem good - not as powerful as Nuendo/Cubase,

but you have access to all controllers there. Quantization, as I recall, was more limited, and there were limited options for transforming midi parts - for simplicity, esp. with large scores, I like to use transforms to et, for example, a max velocity or max cc message for sample sets that have a unique sample at 127, or use parabolic curves for volume changes that manual controllers often wobble through (regardless of the player's steadiness).

The general feel of Samplitude to me was - great for audio, but working with midi feels like midi in an audio app, rather than a balanced mix between the two. It may work very well for you though, esp. given what you are describing about your songwriting approach, and v8.x may have significantly improved midi. I came from Logic, so I am used to a high degree of flexibility and programmability in midi.

included a pic of a problem I'd like to rectify. As you can see, I have WAY
too many remote controls in my living area, and I want to tone the house of
a thousand buttons down. The battery cost alone is deadly, LOL.
Has anybody out there seen a decent solution to this gaggle of remotes I end
up dealing with just trying to relax in front of a movie? Preferences would
include, lighting in the dark, common buttons actually being 'common' (IE,
play means play for the DVD, VCR, etc...) and not having to reattach the
thing when changing out batteries. I'd rather not own a surfboard with
buttons on it, but I understand I have a load of stuff to control.. function
keys or macros would be nice.
units include VCR, TV, Surround Receiver, 2nd DVD

Not sure about all that stuff.
