Subject: Senderella source code ...project
Posted by drfrankencopter on Sat, 20 Mar 2010 01:17:28 GMT

Not sure how many C/C++ coders there are here, but I've posted the Senderella source here:
http://web.ncf.ca/fk824/paris/senderella.cpp

I've marked up the source code to the best of my current understanding, but if there's any other Parisians that could have a look and possibly answer some of the questions I've raised in the comments, that would be great.

I've been PM'ing ModuLR (the original developer) regarding this code, but don't want to keep pestering him as he's moved on.

I'm looking to make this plug-in more Paris friendly, have the same pan law, support mono send to stereo receive, and maybe more.

Any help would be more than welcome...

Cheers

Kris
