Now that I have Paris running on XP, I need some recommendations for a Paris-friendly video setup. I have a 17" running 1280x1024 for desktop and project window, 2 19". widescreens at 1440x900 for audio and automation, and I'll be getting a larger LCD for the mixer window.

I have one AGP and 2 pci-x slots. The agp card can be only 1 slot wide or it will overhang an EDS slot.

Suggestions?
