is 220V-European)
can take this apart.
So might be a bare bone 7 pci slot board one host and one pci card plus cable
fully functional.
I could not have my EDS cards in there working reliable cause my motherboard
system is not suited for this thing.
The system now is working perfectly with UAD1 , one Gigabit lan card and
one PCI video card (used to have also a powercore inside) but can live without
them..., lan card will go inside main PC.
Regards,
DimitriosTo clarify:
I have the magma thing for trade with paris stuff...
Regards,
Dimitrios
