Yo!

"The Ducker" is now posted at www.ensoniq.ca for your downloading pleasure.

The Ducker is the first side chain compressor for the PARIS system. Based on the PARIS Compressor, it compresses the left signal based on the right input, allowing for ducking or creating new sounds by altering the side chain signal with eq or distortion.

Let me know what you think!

Mike

Hey Mike,
Hey Mike,

So you use it in stereo but the right side is the key input
an the left is a mono ducking comp? Ties up a channel
but that's ok if it works. Does audio pass through the
right side unaffected?

Tom

Hi Aaron,

Thanks for offering to donate and for letting me know about this. I just tried recreating the buttons, but they still don't work. We'll see what Paypal has to say.

My email address is Mike AT MikeAudet DOT COM.

Cheers!

Mike

Hi Tom,

The right channel isn't passed at all. The output is the left side on both the right and left output (mono over two channels).

The idea I had was you can set the compressed channel's effect send to pre-fader and then mute it. The output of the effect then becomes that channel's output into the mix. The side chain signal can either be muted the same way and not be part of the mix at all, or you can blend it in if you are ducking by using the channel fader as usual.

I had to get creative to make it work with the PARIS mix topology. But, it works!

All the best,

Mike

Finally got the chance to download and just sent you a PP donation--keep up
the great work! How 'bout that Eventiter...:)

Hi John,

Thanks for the support! I took a look at the eventiter code, and it already assumes 44.1 for its calculations, so unless you're working at 48k, a sample rate fix won't help the sound.

Does it get grainy just at high input volumes? I could probably add a input gain knob, if it doesn't already have one. I bought a copy of it back in the day, but I don't use that type of effect much, so I'm not that familiar with it.

I've been hacking DSP code regularly these days, but I still can't read most of it. I doubt I'd be able to improve the algorithm itself (at least not until I can figure out more of the ESP assembler syntax).

Let me know what you think.

Mike
