Just loaded Paris 3.0 into WinXP from 98 where Paris was working fine. Now upon loading the Control 16 is frozen and cannot playback or anything. Sometimes it loads ok and does work. Also the 442 is often missing in the patchbay. Have to exit and start up a few times and then it's there. Any help out there ?

Did you locate/use the BETA XP drivers, and if so were you very, very careful to watch what path the subsystem patch installed to?
