xperience with FX Tel. Most of my successful WH2 experiments were using DP on a G5 as the primary DAW and my XP PC as the DSP host. I also brought VSTI instruments from Logic into DP both on the same Mac and across two Macs. (ADC will never adjust for live latency).

You should try the demo before you consider purchasing. Not everyone has had 100% smooth sailing (like with Paris.)

Waves has just announced a box that will do something similar to WH across a network, but the Waves box only runs Waves plugins and costs around 1200.00. You can do the same thing with WH2 if you have a spare PC hanging around.

Geneyou mean to tell me you went to all this trouble and gave up before using a HAMMER on it????

ry to boot into a 9.2.2
from another drive. Won't see it. Copy that folder onto the desktop of the
G3. Still won't see it.

Hmmm. Got a 9.1 disk in the deal. Boot from that disk - works fine. Start
Disk doesn't see the 9.2.2. It does say there is a 9.1 on the hard drive,
though, so I select it. Reboot. No good.

Defaults to the CD. I can't get it to boot from anything but the CD now.
And of course, it won't allow me to eject the CD that it's booted from, since
it's running from the disk.

So her I have a nice G3 doorstop, apparently. Is there anyway to manually
eject the CD so I can start over?

In the interim (like this morning) I got a G4 with almost no memory. Yes,
I've gone hog wild. The G3 memory is happy inside the G4. But I still wish
to remove the os 9 disk from the G3. I can't find a hole for a paper clip
in this thing. Is there another way to do it?

thanks, oh knowlegdeable ones.

-steve the hog wild artguySteve,

When confronted with such insolence from a computer, I find that a hammer
can work wonders. Of course, not necessarily for the computer p
