Hi Everyone,

It's been tough to make progress this year, but I'm finally getting traction. I've just started testing a version of the PSCL that is designed to work with jBridge. For those who haven't used jBridge, it allows a 32 bit host to connect with 64 bit VST files. I just started testing it with some 64 bit Waves plugins. So far, so good. The updated PSCL has a low priority thread that checks for jBridge processes and moves them off the CPU used by the PARIS application. This way, we can run 64 bit VSTs on all but one available CPU cores, while not running into the thread-safety issues in the PARIS application.

jBridge can be found here:

<https://jstuff.wordpress.com/jbridge/>

My next move is to work on the kernel driver (scherzo.sys). I bought a new ASUS motherboard with a PCI slot, and the driver does not work with this new board. The new board uses a I/O MMU, which is a new thing for PCs. I suspect that this is the problem, but I'll know more next week. An I/O MMU puts the PCI bus behind a memory controller that has to be programmed in order to allow PCI cards to access main memory. It's an extra level of indirection put in place for security reasons. The driver was not designed for this kind of thing.

I still haven't gotten the EV security certificate. The eventually rejected by documents that were signed by a justice of the peace. It's completely insane. An accountant or a lawyer will do just fine, but a judge can't be trusted. It's nuts. I'm going to go see a notary after I get the kernel driver updated. I only get a year on the certificate, so I think it makes sense to wait until I have this next phase done.

That's all I have to report for now.

All the best,
Mike

Mixer/1-SubMix 1 (A) : [Untitled Project]

Edit Functions Settings EQ Aux Tracks Automation

The image shows a detailed view of a digital audio workstation (DAW) mixer. It features ten channel strips, each with the following components from top to bottom:

- ByPASS** and **Abbey Road** (checkboxes)
- EQ 1 OFF** (toggle), frequency knob (set to 1000 Hz), gain knob (set to 0.0 dB), and bandwidth knob (set to 1.5)
- ALL EQ** (toggle) and **EQ ON** (toggle)
- L 100** and **R 100** (knobs for left and right balance)
- SOLO** and **MUTE** (knobs)
- Two vertical faders for channel volume (range 1 to 70)
- REC** and **AUTO** (checkboxes)

 The time display at the bottom left of the mixer area shows 00:01:48.555.

The IR-L convolution reverb plugin window is open, displaying the following information:

- Name:** Hall - 1
- Type:** Concert Hall
- Date:** 24 Mar 2004
- SR:** 96000Hz -> 44100Hz
- Emitter:** Genelec S30D
- Convolution:** 1.85s (Original), 1.85s (Current)
- RT60:** 1.4s
- Channels:** 4
- Size:** 11267
- Distance:** 13m

 The window also includes controls for:

- Reverb Time:** 0.000s
- Conv. Length:** Full
- Latency:** 11ms
- Dry/Wet:** 100
- Direct:** Off
- Output:** -2.8 and -2.6

Options:

Post Notification

The Transport window is open, showing the following controls and displays:

- Standard transport buttons: Stop, Previous, Play/Pause, Next, and Record.
- Time display: 00:01:48:16.6 (SMPTE)
- Time display: 00:00:00:00.0 (SMPTE)
- Additional buttons: P, N, S, L, 0, PUNCH, LOCK.
