Although I purchased Paris in 1998, and used a 2 mec 2 eds1000 card win98 sysem to run a commercial studio until 2003, I have only sporadically run my system since that time.

Recently, I was asked to do some work for what was supposed to be a piano trio, and for not completely understood reasons I took on the project.

I found this newsgroup last evening while trying to remember how to patch in the output from my B mec, as with parts and guests, I now have 24 tracks running.

Although I figured out my problem while waiting for my new password to join this esteemed group, I am wondering if Mike Audet is still vending updated drivers for Win 7 or 8, and what is currently the best host hardware configuration?
Any clarification or help would be gratefully appreciated!

I also have to say that I am in awe of you all for continuing to support this system, pretty much 15 years after it became orphaned. You guys are amazing, and I am very glad to have found this door and knocked on it.
Thanks!
Ben

Ok, I found my answers in replies from Sept and Oct 13.
Anybody using win 8 successfully?
Thanks!

Welcome back Ben, I remember you from the old PARIS newsgroup, I went by Will Wilson back then.

As far as I know the current drivers only work on Win 7, and they work better than ever, Mike has really kept PARIS alive.

Look around the forum, I believe there are some people that are using Windows 8 and Paris with Mike's drivers.

Thanks guys! I haven't tried Windows 8 because I'm boycotting it, but I hear the drivers work fine.

Cheers,

Mike
